

Mousetrap Playbook

Offense

Goals

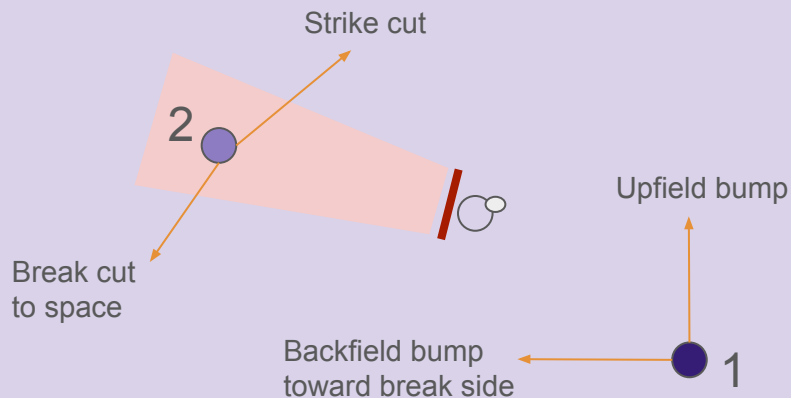

- Move the disc efficiently down the field
- Make smart decisions; don't force things that aren't there
- Use the full field
- Attack the open space
- Time cuts off of movement

Resets

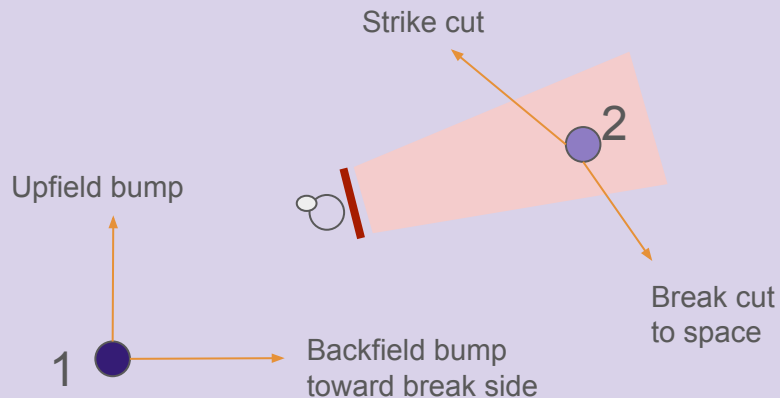

Resets at Center Field!

- **Force side reset look is primary** - set up backfield at 45° for TWO cut options
- **Break side reset look is secondary** - set up upfield in the mark's "dead space"
- **Fully activate reset with HIPS** - Look by stall 4, force side reset is behind you!
 - Stay committed until reset calls themselves out then look to break side reset
- Handlers need to communicate constantly and maintain their reset positioning

Forehand force

Backhand force

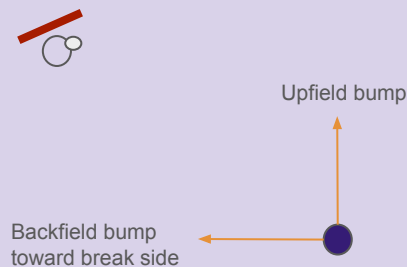

RISE UP Handler Cutting video

<https://www.youtube.com/watch?v=OUg1O5XNVmQ>

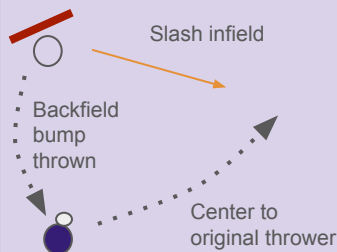

Resets on the Sideline!

- **Set up primary reset look based on the force**
- **Fully activate reset with HIPS** - Look by stall 4, force side reset is behind you!
- If backfield dump thrown, thrower should slash infield for a centering pass
- Off handler needs to be ready to fill to give thrower a second set of reset cuts
 - Primary reset should clear up field to give second reset space

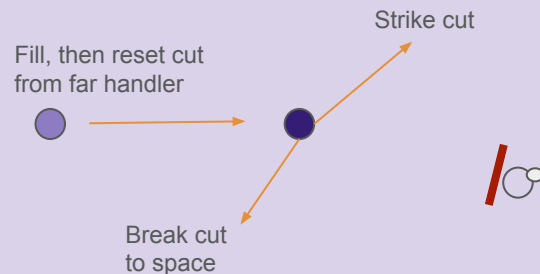

Break Sideline Options

Recenter after Backfield Dump

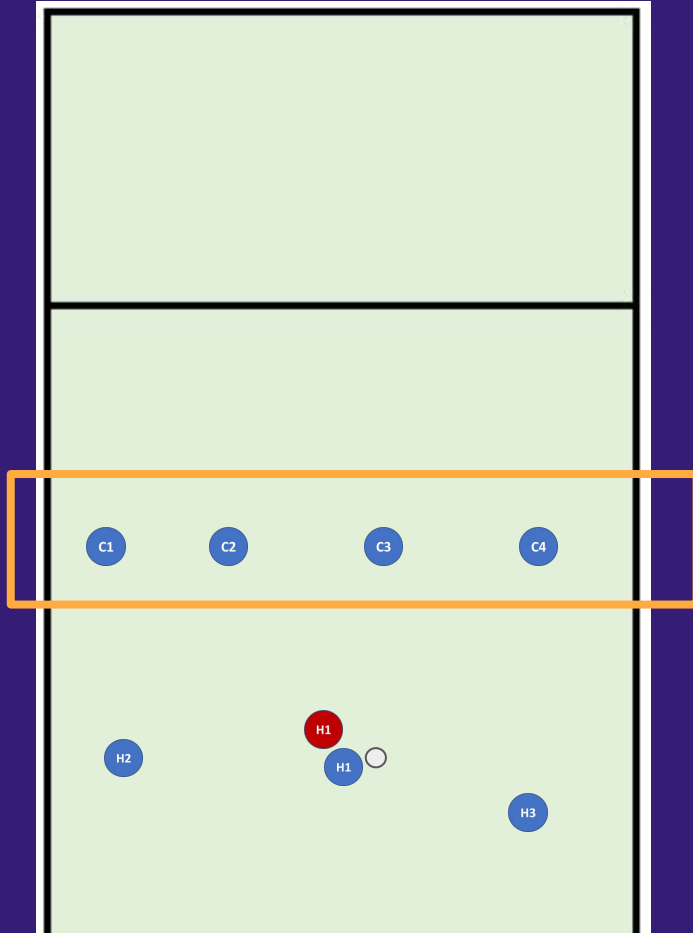

Force Sideline Options

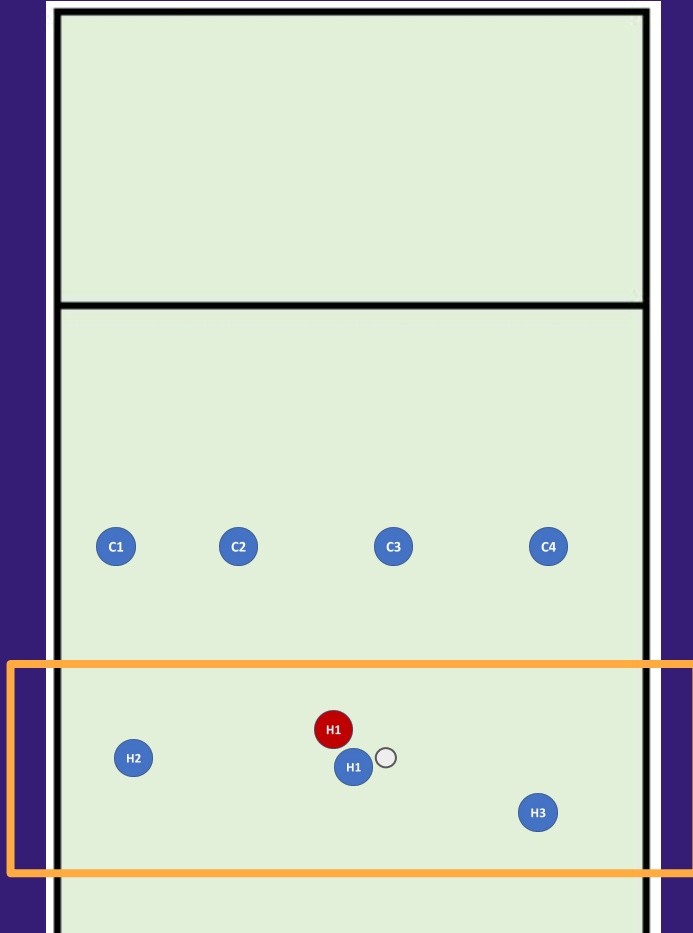

Horizontal Stack

Horizontal Stack: Cutters

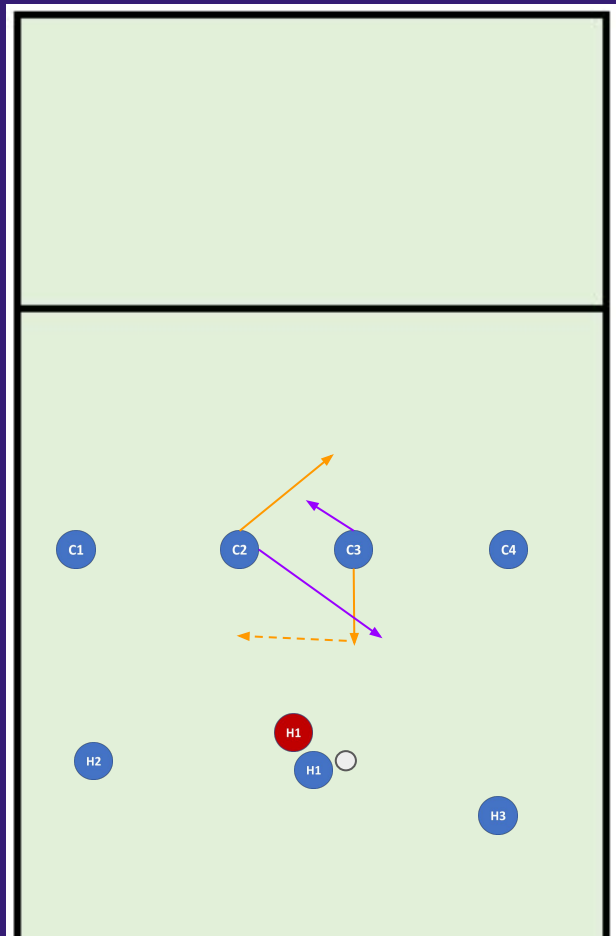

- **C2 and C3: Active Cutters**, the two cutters closest to the disc
- **C1 and C3: Rail Cutters**, the two cutters closest to the sideline
 - Note: You can be both the active cutter and the rail cutter at the same time if the disc is somewhere other than the center of the field
- **C3: Primary Cutter**, the agreed upon first cutter who should usually line up in the force/open side

Horizontal Stack: Handlers

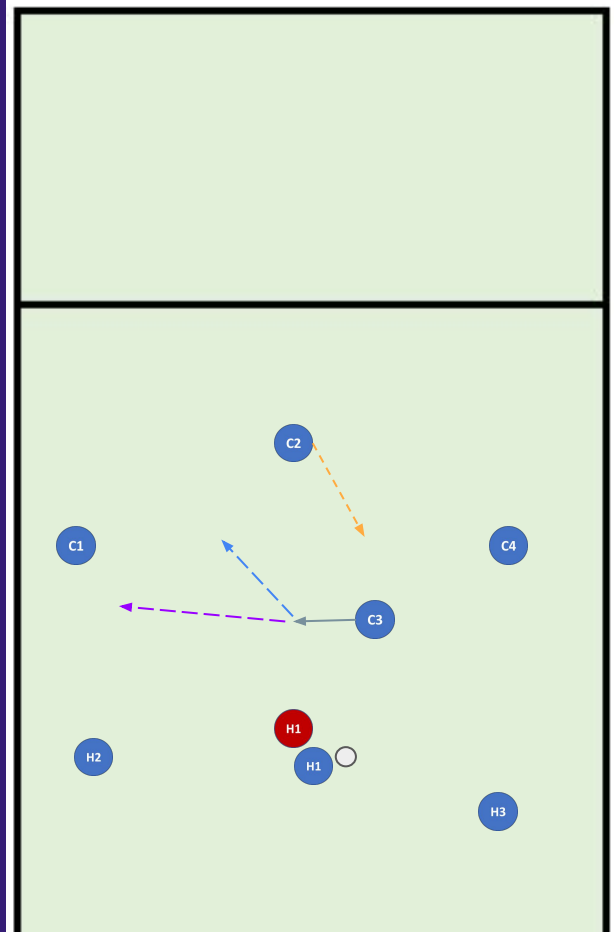

- **H1: Ratchet**, the middle handler
- **H2: Breakside Handler**, the handler on the breakside of the mark
- **H3: Open side Handler**, the handler on the open side of the mark

Horizontal Stack: Cutter Movement

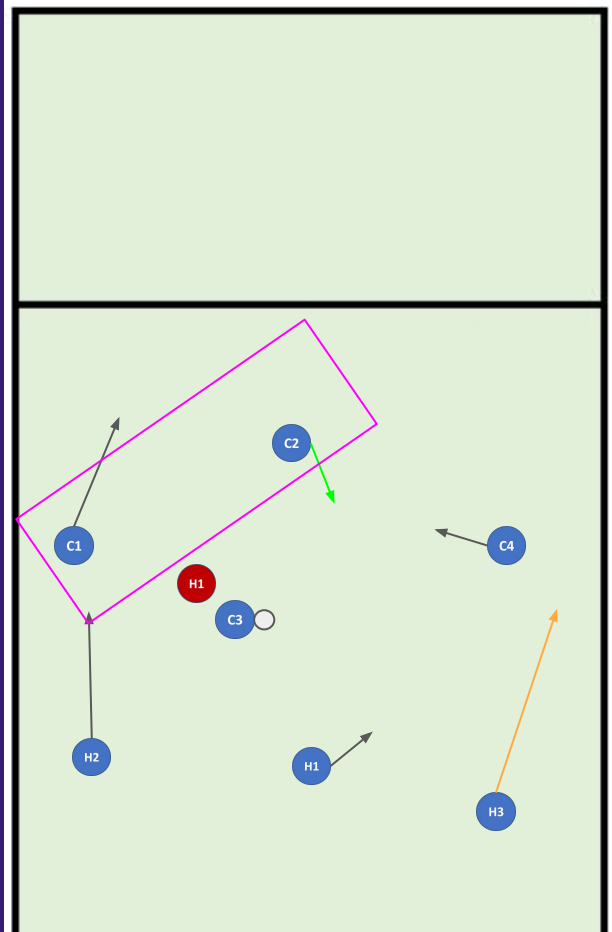

- First cut attacks the open side under space
- Typically, open side cutter initiates but active cutters should communicate
- **Option 1 (common)**: Open side cutter (C3) under, break side cutter (C2) drifts deep
- **Option 2 (less common)**: Break side cutter comes under, open side cutter drifts deep to the break side
- Which options is used may be based on how the defense is set up

Horizontal Stack: Cutter Movement (continued)

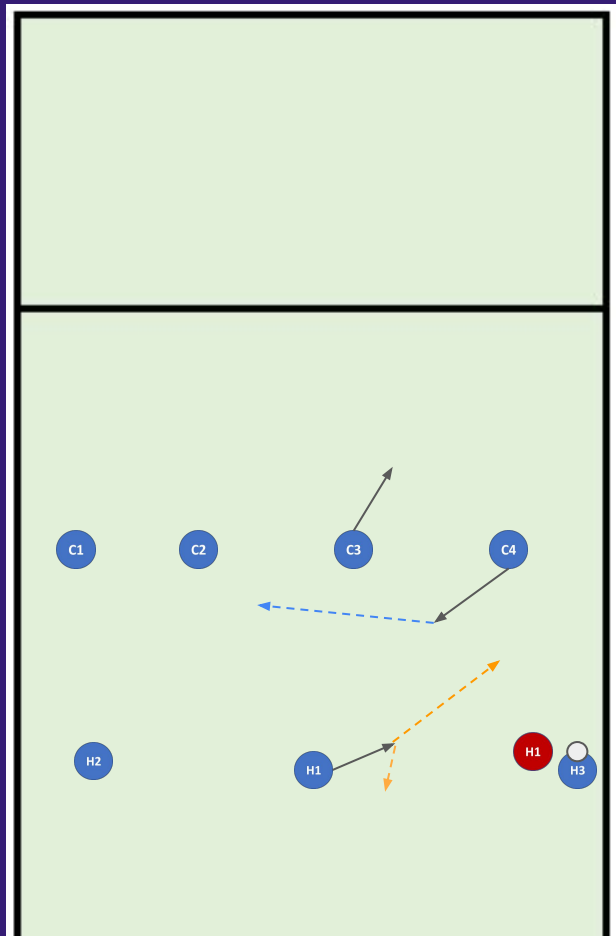

- C3 clears to the break side after cutting into the open space
 - This break side space is still a viable space to get the disc
- If the break throw is looked off by H1 then C3 will **clear to the sideline** or **rotate back into the stack**.
- At the same time C2 is **attacking the open side under**.
 - Look to the handler with the disc for the fake under
- If this option isn't viable, it is time to look for the reset

Horizontal Stack: Cutter Movement (continued)

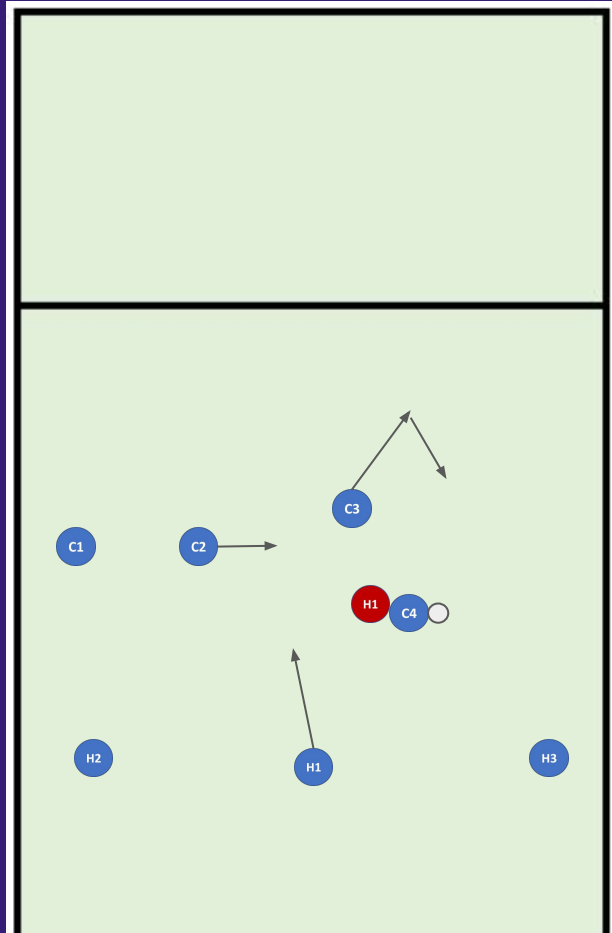

- If the break throw goes off to C3, C1 and C2 become the new active cutters.
- C2 is the primary cutter, the first look to the open side.
 - There is also the option to bump back to the handlers pushing up field (H1 and H2)
- The reset handler (H3) can push into the cutter space if the cutter is back in the handler space

Horizontal Stack: Force Sideline Movement

- **Goal: Get the disc off the sideline**
- C4 slashes towards the breakside while C3 is drifting deep
 - C3 should make sure to leave the under space open for the handler reset unless faked under
- If the throw doesn't go off to C4, they should **continue towards the breakside/far sideline**
- At this point H3 should **look to the reset handler (H1) for a reset**
- C3 should remain deep to allow for the upline reset cut
 - Unless they are faked under by H3

Horizontal Stack: Force Sideline Movement (continued)

- If the throw does go off to C4, C2 and C3 become the active cutters
 - C3 is in a good position for a continuation or an under
 - C4 can also look to bump it back to the handlers moving up field (H1)
- Handlers need to communicate about who is primary reset
 - This may be a time for the far handler (H2) to push upfield into the cutter space and H3 and H1 to fill around into the reset spaces

Force Side Sideline Look by Look: Garlic Slash Cut

Look 1: Garlic Slash Cut

Look 5: Swing cut from filling handler

Stall 7-8

Force Side Sideline

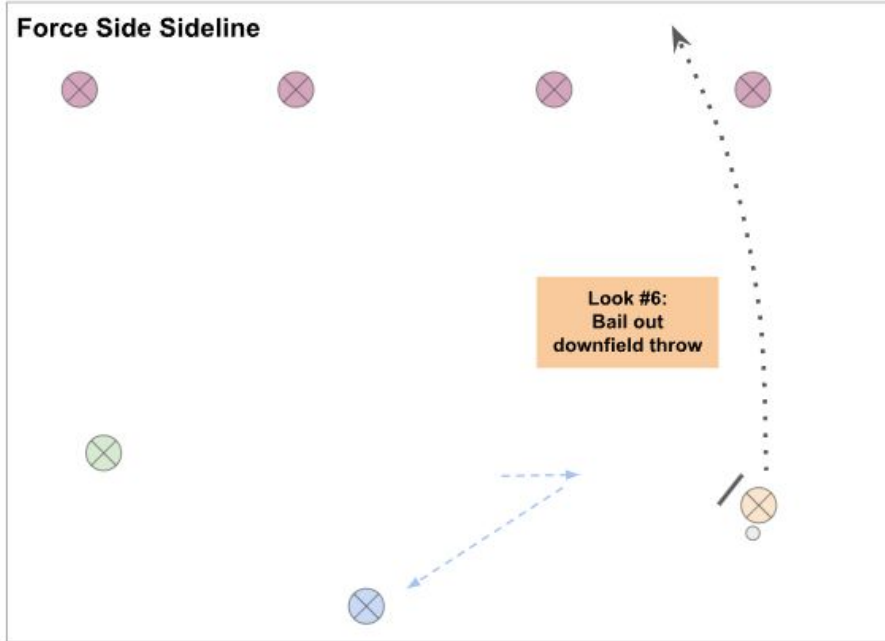

Force Side Sideline Look by Look: The Bail Out

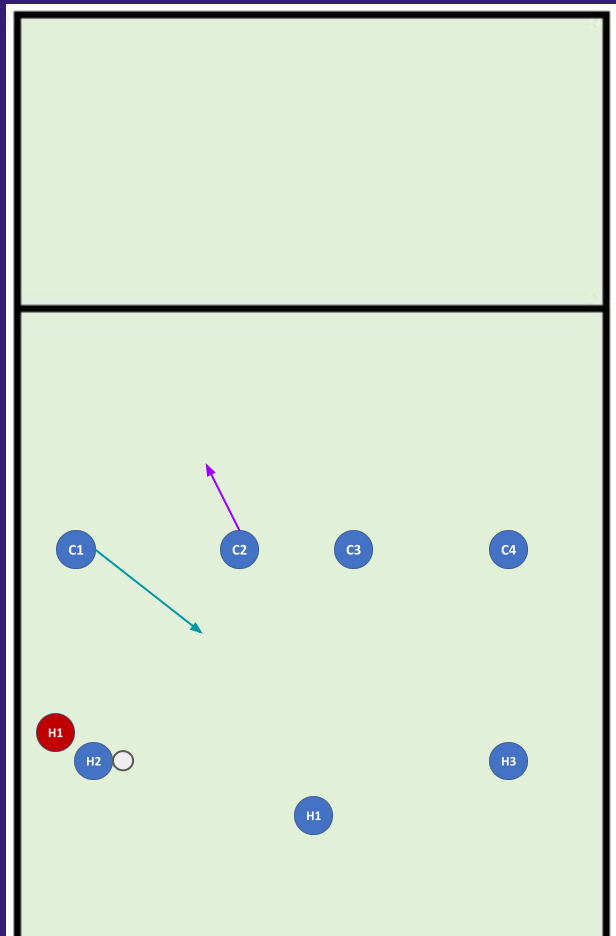

Look 6: Bail out throw/huck

Stall 9

Force Side Sideline

Horizontal Stack: Break Sideline Movement

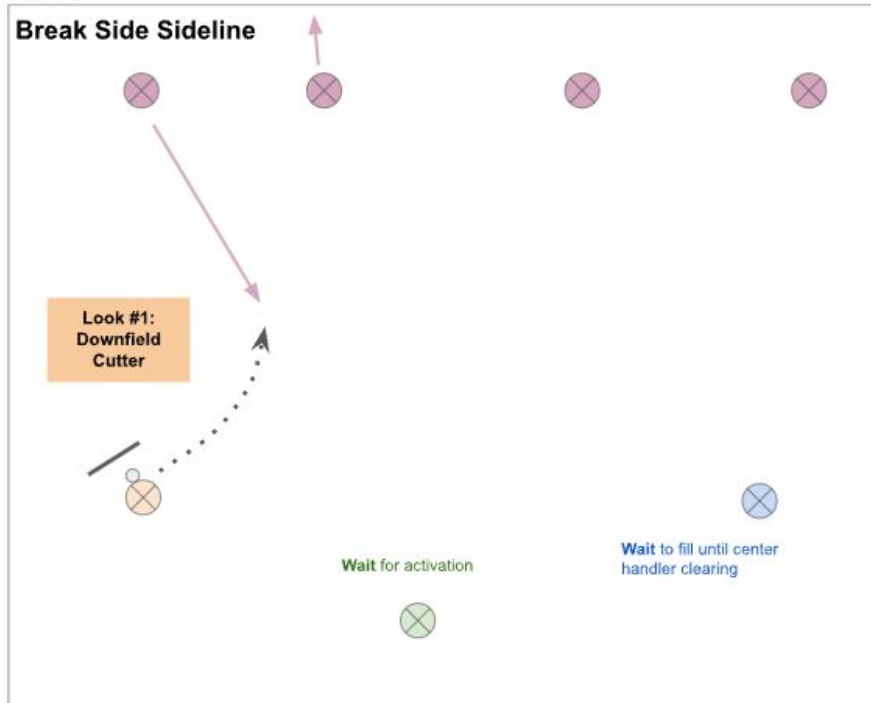

- **Goal: Get the disc off the sideline**
- Sideline cutter (C1) slashes under and off the line
 - Make this a more diagonal cut to allow more room for the throw
- C2 should be simultaneously drifting deep
 - This leaves space for handler movement in the under space
- Handlers can look for the give and go between H1 and H2 to get it off the sideline

Break Side Sideline Look by Look: Downfield Cut

Look 1: Downfield cutters

Stalls 1-3

Look 3: Forceside dump or bump cut from middle handler

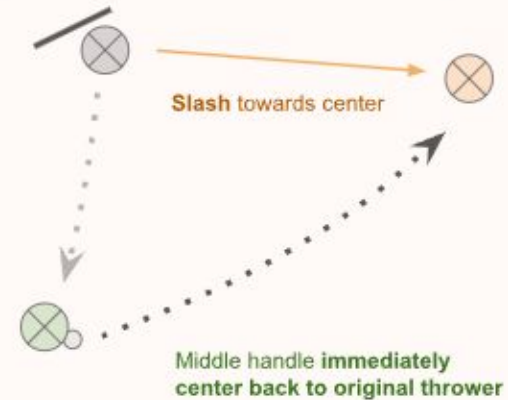

Stall 4-5

Break Side Sideline

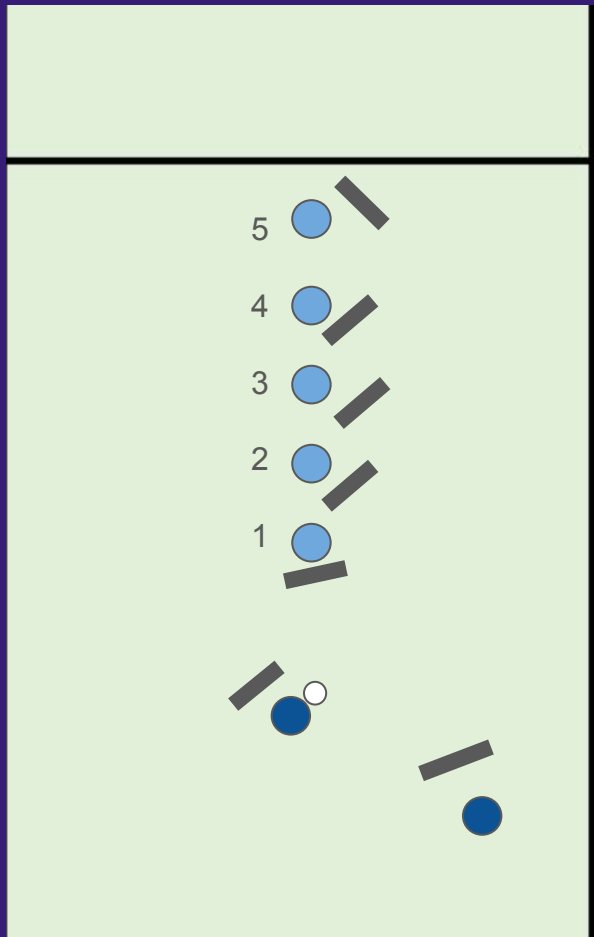

If dump thrown:

Look #3 part 2: If dump thrown, re-center to cutter

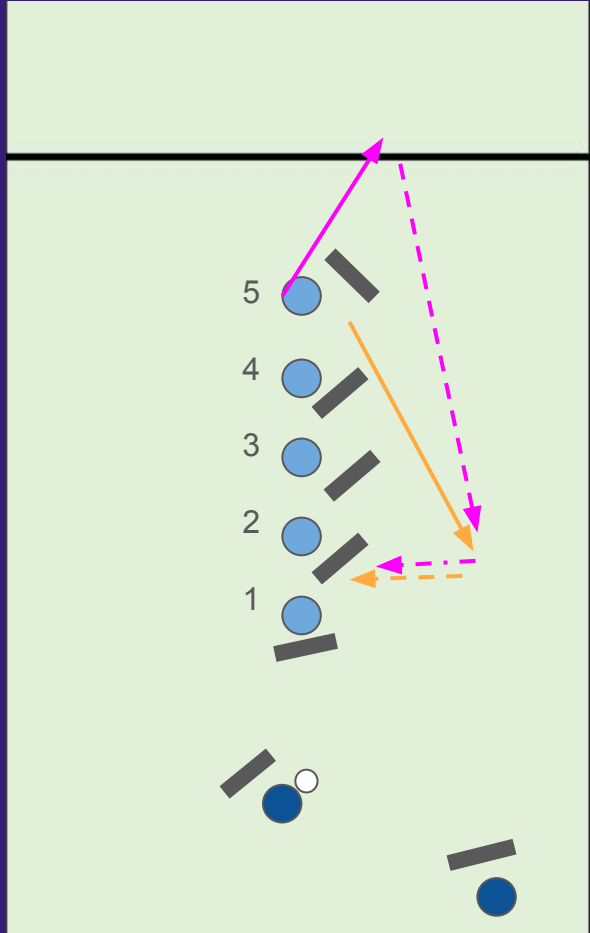

Vertical Stack

Vertical Stack: Intro

- Positions in the stack are often referred to by number, with 5 being the cutter who is the furthest deep
- Generally we want the stack in the middle of the field about 5yds from the handlers
- Off Handler
 - Typically we want the reset 45 degrees back on the Force side (pictured here)
 - Otherwise, we want them a little forward on the breakside
- Handler with Disc
 - Roughly in line with the stack
 - If you're too far to the force side it is very hard to hit the break side (and in some cases the open side)
- 1 in the stack is often a handler as well, and will fill to the handler space when needed (more on this later), they also set the stack

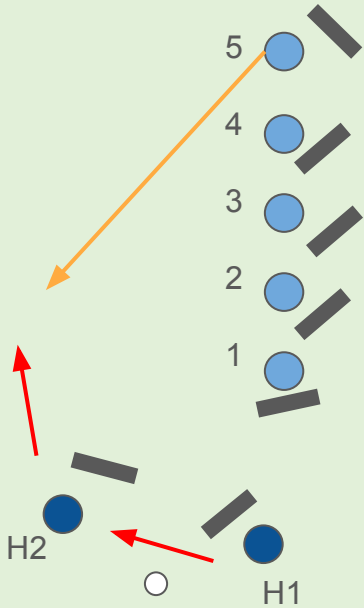

Vertical Stack: Cutters

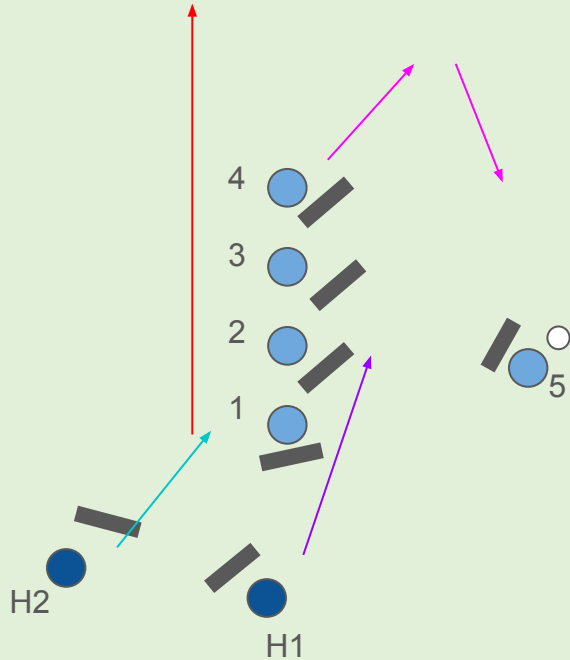

- **Option 1:** #5 in the stack cuts under, and clears back into the stack in the #2 position. This can be done on both the force and break side.
- **Option 2:** #5 in the stack goes deep, comes under, clears back into the stack in the #2 position
- As the disc moves up the field, the stack needs to move upfield as well, it is important to run to get the stack into position and to maintain spacing between cutters
- Initiation cuts may attack both the force and break side, as well as deep + under

Vertical Stack: Continuation cuts

- Disc gets reset to H2 on the break side, #5 in the stack comes under for the continuation throw from H2

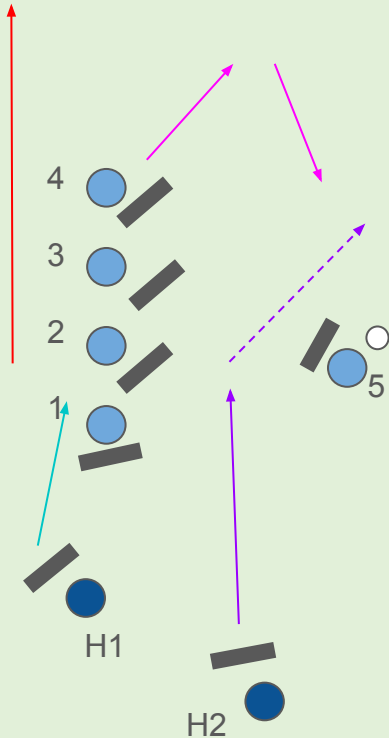

Vertical Stack: Continuation Cuts, Reset on breakside

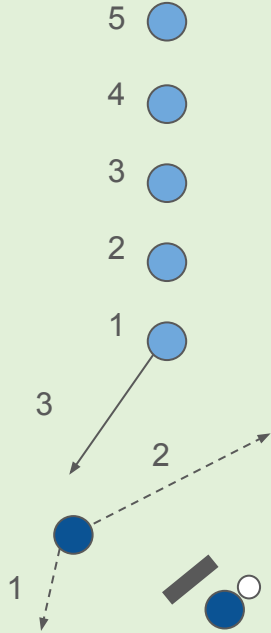

- #5 has caught the disc
- The whole stack needs to move upfield
- If #4 had already begun setting up their cut as #5 went under, they should come under for the continuation
- H2 should clear to the #2 position in the stack
- H1 will become the reset handler
 - If a cutter is not coming under, this is sometimes a really good time to strike and get the disc right back

Vertical Stack: Continuation Cuts, Reset on force side

- #5 has caught the disc
- The whole stack needs to move upfield
- If #4 had already begun setting up their cut as #5 went under, they should come under for the continuation
- H1 should clear to the #2 position in the stack
- H2 will become the reset handler for #5
 - If a cutter is not coming under, this is sometimes a really good time to strike and get the disc right back (dashed purple line)

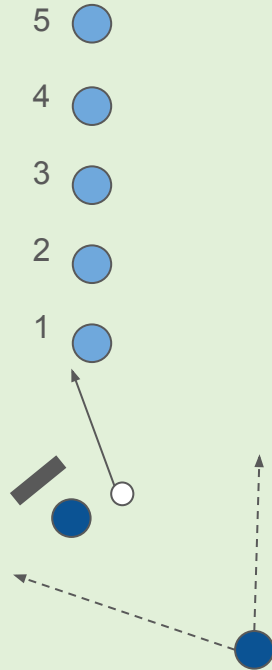

Vertical Stack: Handler Movement

Reset is on the breakside

- Reset handler has two options, getting the around, or striking
- The around is our first look, if it is not viable, reset should immediately clear out
- #1 in the stack will fill for the around

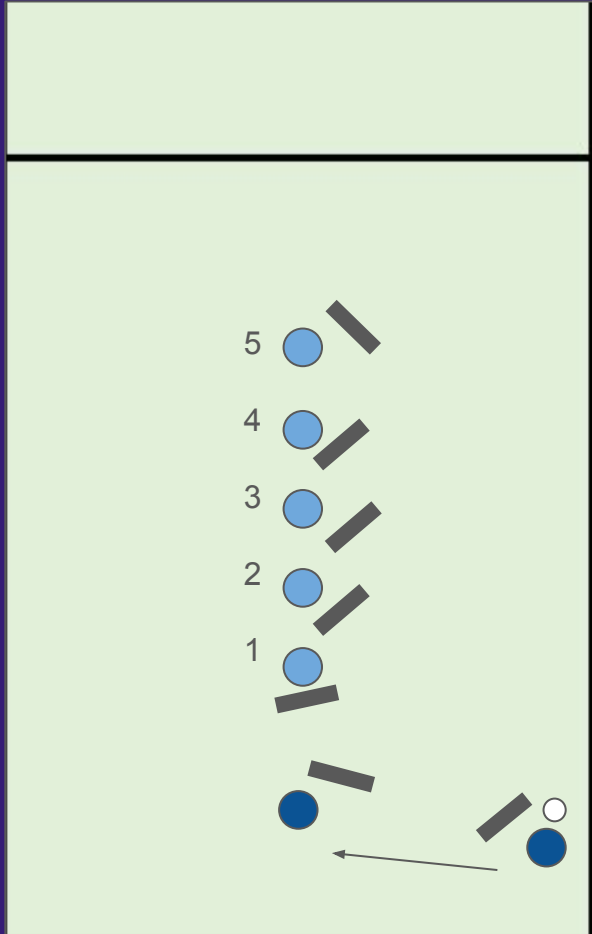

Vertical Stack: Handler Movement

Reset is on the force side

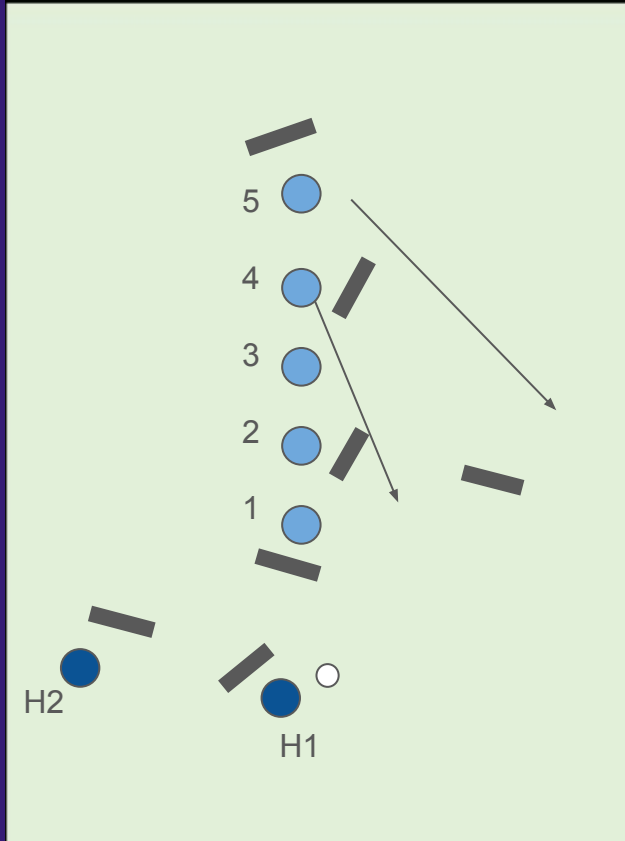

- Reset handler has two options, go behind the handler for the dump, or cut upline
- The dump is our first look so we can swing the disc to the breakside
- The handler with the disc can also look at #1 in the stack for a skinny inside
- If the reset handler cannot get open they should clear out of the handler space and #1 in the stack will fill into the handler space

Vertical Stack: On Force Sideline

- If we are on the force sideline the first look should be for the around

Vertical Stack: Poach and Brackets

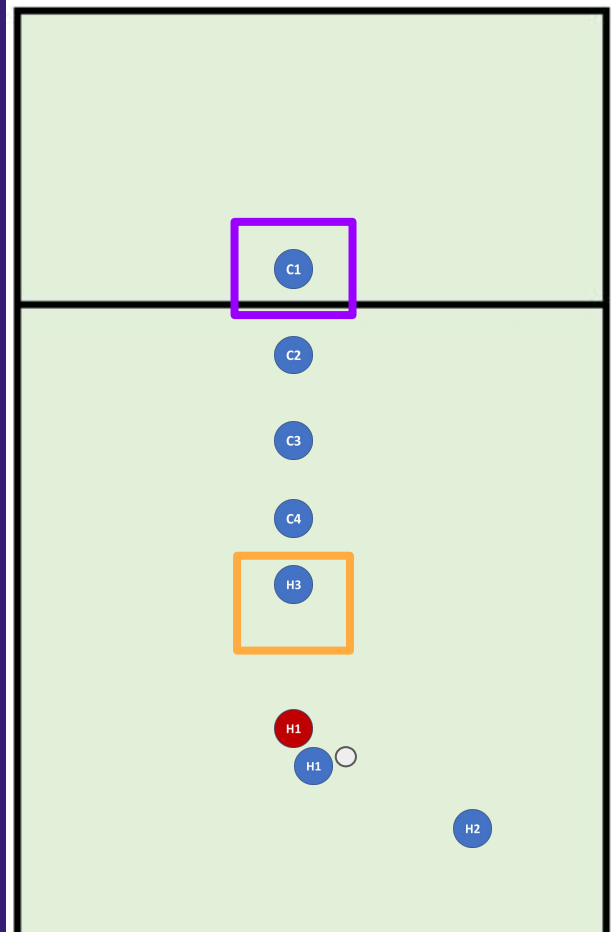

- We will be seeing poaches and brackets when we play a vert stack
- The way to break a poach or bracket is to intentionally double cut to split the defender. The goal is to make the defenders pick one of you to defend, hopefully leaving the other open.
- #2 and #3 in the stack are often the poached player (their defender is poaching)*
- Poaches are most commonly in the under space, but you can also get poaches in the deep space.
- 2 common bracket types
 - Deep/Under, one defender covers the deeps, one defender covers the unders, everyone else plays person defense
 - Breakside/force side, one defender covers the breakside, one defender covers the open side
 - This is most common between two players of the same gender match, which means two players of the same gender match need to be involved in splitting the poach

*there are some thoughts in the notes as to what to do when poached

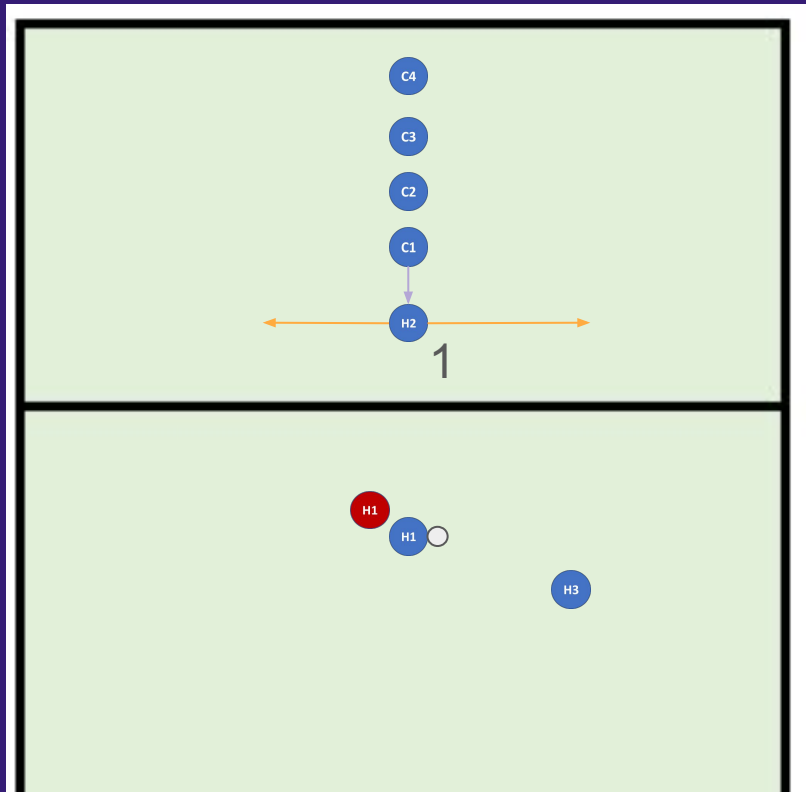

Endzone Offense

Vertical Stack

- **H3: Front**, the person who sets the stack and is closest to the disc
 - This is usually the third handler
- **C1: Back**, the person last in the line who is farthest down the field

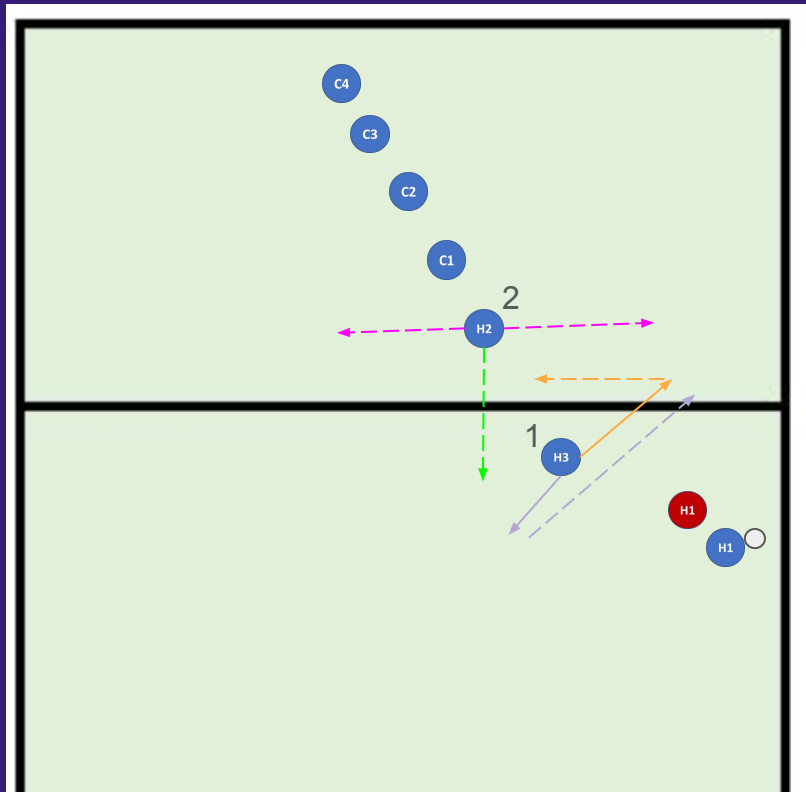

Center Endzone Flow

- **First Look:** Front cutter(H2) cuts to either the open or the break side
 - Note: This doesn't need to be the third handler. Whoever is at the front will be this look.
- C1 waits until H2 makes their cut to fill in and make a move
- C2 through C4 are just waiting and engaging their defenders
 - They can occasionally make wide cuts if the opportunity is right and they aren't cutting off the active cutter
- Note: The front of the stack does **not** need to score with every cut. It's still valuable to have cuts that change the angle of attack, even if they end up short of the endzone.
 - Often, the person who threw the disc to you can follow their throw for a quick dish goal.

Ultiplays Examples: [Backfield reset](#) | [Upfield reset](#)

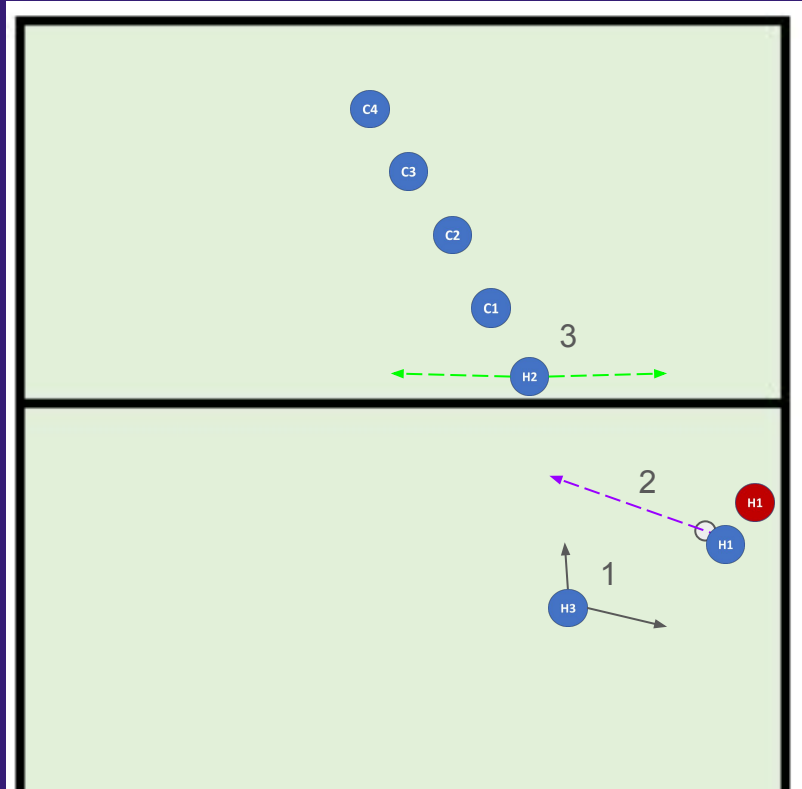

Open (“Trap”) Sideline Flow

- **First Look:** Reset handler(H3) positions themselves slightly upfield on the breakside
 - **Option 1:** Backfield cut, if the thrower pump-fakes then cut upline
 - **Option 2:** Strike cut, if the thrower pump-fakes then make the 7 cut
- Front of stack(H2) waits for H3 to commit to their cut
 - If the disc is centered on an around H2 can **cut to the open or breakside** like in center endzone flow
 - If H3 strikes, H2 **fills in as the reset**

Ultiplays Examples: [Successful strike](#) | [Strike to fill](#) | [Around reset 1](#) | [Around reset 2](#)

Break (“High”) Sideline Flow

- **First Look:** Reset handler(H3) sets up 45 degrees back
- H1 looks to H3 for the backfield reset then **cuts immediately up field** for the give and go
- Front of stack(H2) waits to **react off of this movement for the continuation**

Ultiplays Examples: [Backfield reset 1](#) | [Backfield reset 2](#) | [Upfield reset](#)

End Zone Vert: Film Examples

Film example: Carleton Eclipse (12:34 timestamp)

- (Doesn't start near end zone but follows the same principles, so we're including it as an example)
- Backfield handler gets pumped, turns into a strike cut
- The front of the stack fills the backfield space.
- Striking handler completes a seven-cut to the break side, receives the pass, then has a wide open throwing lane (super clean wow!)

Film example: DC Truck Stop (17:35 timestamp)

- This starts in a place of more chaos, but they still find their way into fundamental flow
- Player strikes upfield, freeing space for an around there to the player who was at the front of the stack
- That player receives the around, pumps a contested throw, then (now that the disc is centered) looks to the front of the stack to initiate
- Player at front of the stack gets easily open, seemingly because all this movement has caused confusion in defensive switches
 - Note that this cut didn't result in a goal. That's fine! Cutters at the front of the stack can make their cuts out of the endzone boundaries.

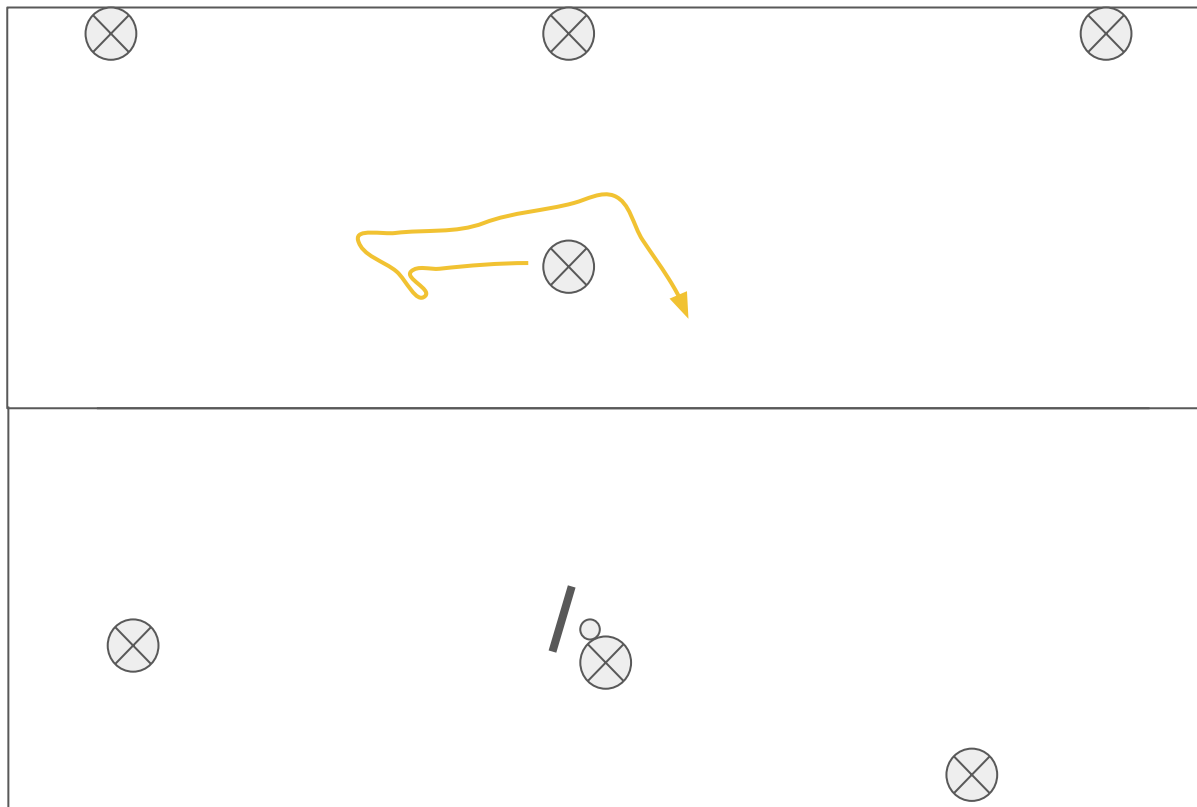

BABY ISO

Single isolated cutter to make as many cuts as needed to get open
- does not clear

If not open within 4 stalls, thrower resets to another handler

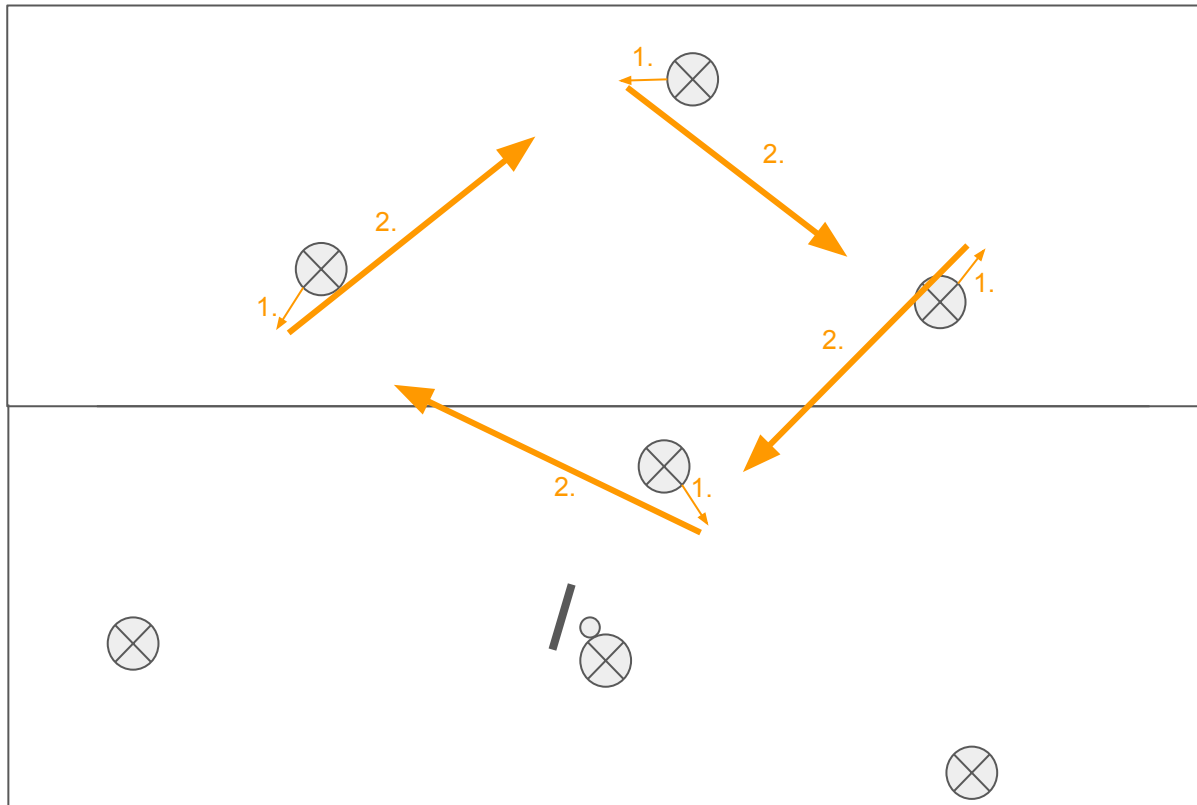

If needed, during reset iso cutter can switch out with another cutter

Can be called and executed during a fast break - other cutters file to back along sidelines

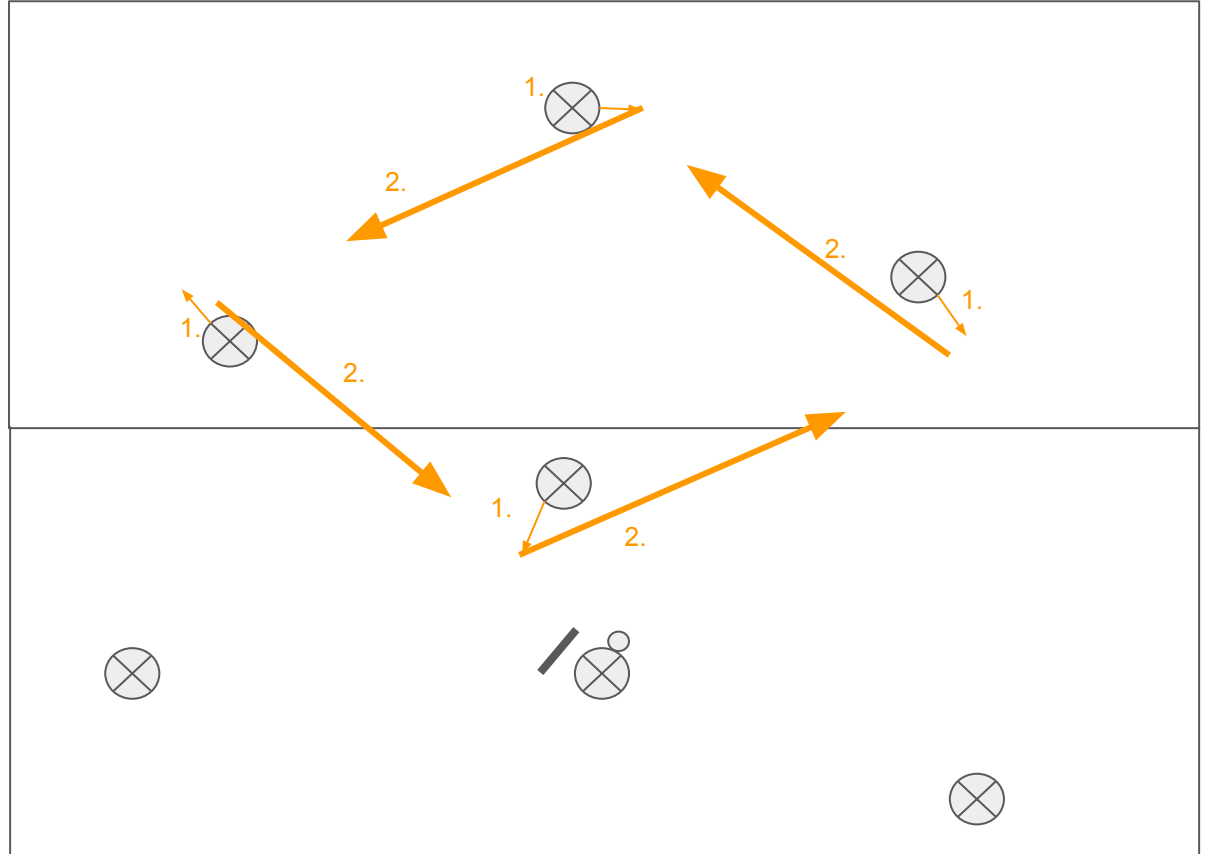

COOKIES - Clockwise

- All cuts simultaneous!
- Not force-dependent
- Everyone is an option

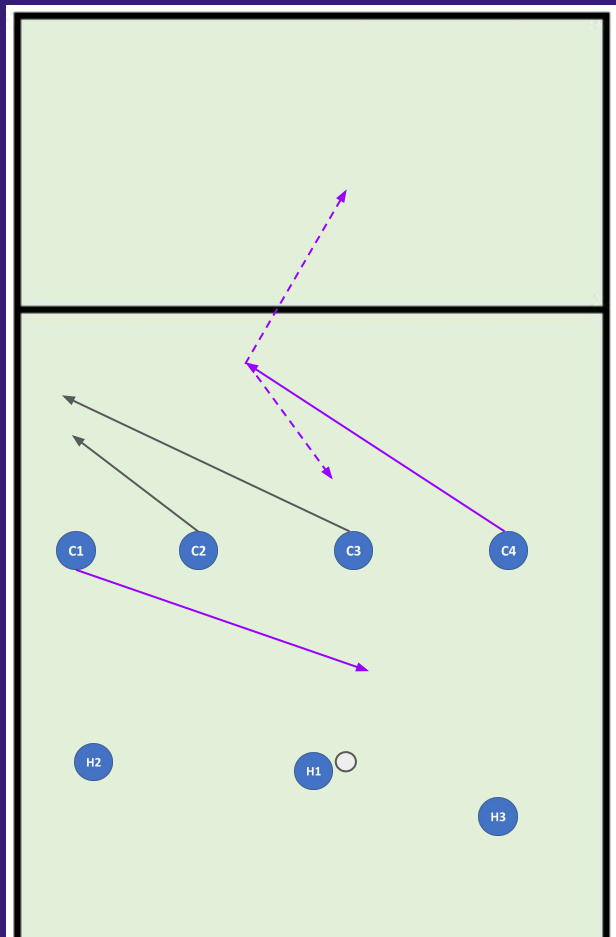

COOKIES AND CREAM - Counter Clockwise

- All cuts simultaneous!
- Not force-dependent
- Everyone is an option

Offensive Plays

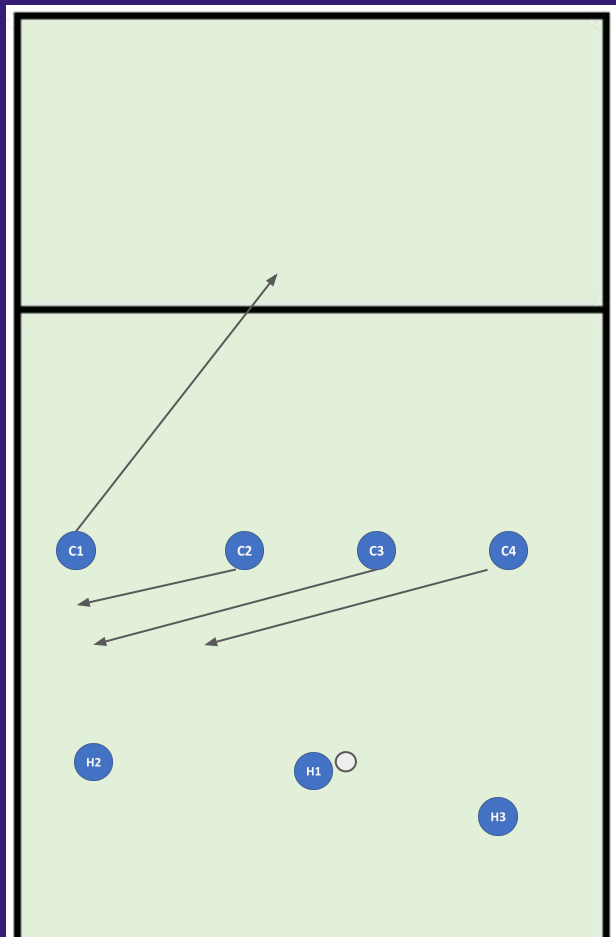

Flood

This is a play for after the pull or off of a dead disc

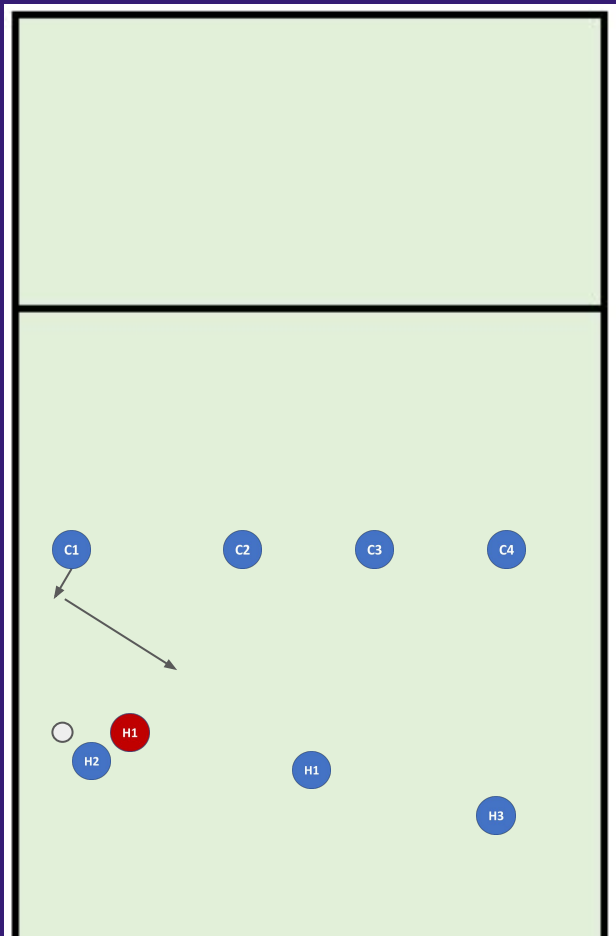

- Goal: Isolate under space for C1, who can hit a quick continuation throw to C4
 - C2 and C3 clear to left side rail
 - C1 (left side rail) cuts across to the open side for initial under throw
 - C4 is the continuation cutter for C1
 - If C1 doesn't get the disc, C2 is the second under, activating off a reset
- Can be ran from either side; is not force dependent

Reverse

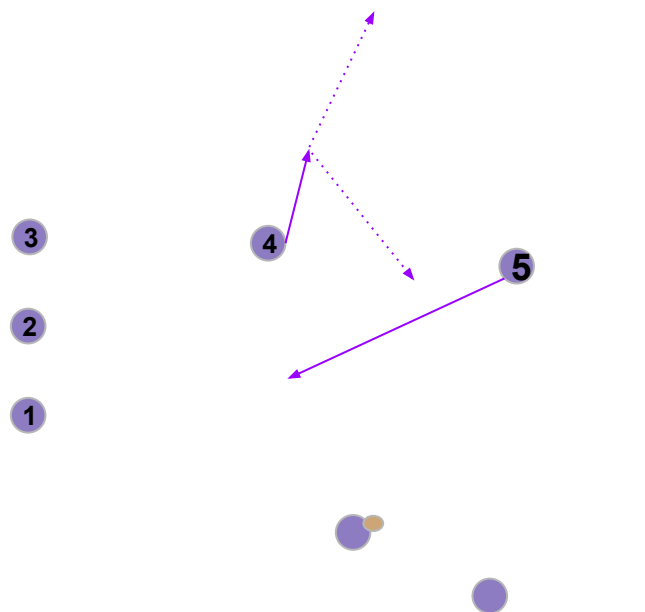

- **This is a play for after the pull or off of a dead disc**
- Goal: Isolate the deep space for C1
 - C2, C3, and C4 clear to left side rail
 - C1 (left side rail) cuts deep to the open side, they should keep an eye out for the fake to initiate them under
 - If C1 doesn't get the disc, handlers should reset amongst themselves and we should return to our regular flow
- Can be ran from either side; is not force dependent
- C2 and C3 cut under towards the break side (in this example)
- C1 (break side rail) cuts deep towards the open side

Garlic

- **This is a play for off of the sideline**
- Rail cuts under towards the sideline
- Then makes a sharp pivot and cuts towards the center of the field

Initiation Inactive Clearing
Continuation Reset

Box

Side stack with two cutters out

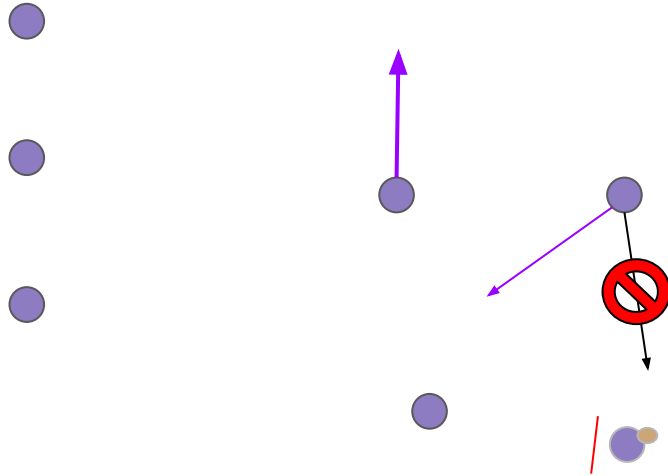

- Set-up/Initiation: Slash cut from 5 clears tons of space for 4 to attack
- 1 sets the side stack and fills as handler if needed
- Either 4 or 5 can initiate in either direction

Goal is to isolate strong match-ups that can cook in the open space.

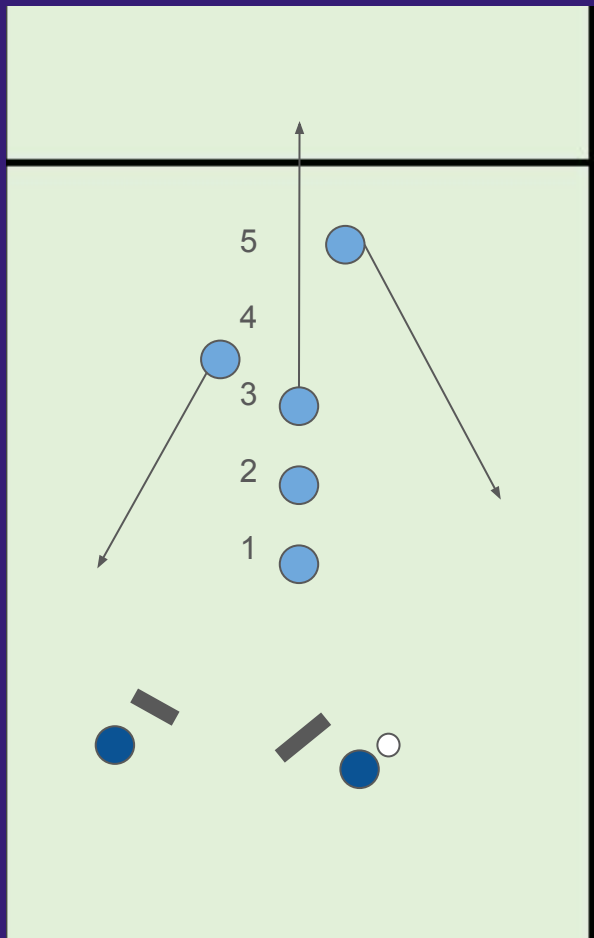

If we need to break out of box, break into a ho stack

Box (Starting on side-line version)

- Rail cutter engages their defender with 1 or 2 steps, then slashes to the inside
 - Do NOT come into the handler reset space (black cut) with the under cut - we want 1 or 2 hard steps under and then a slash for a break throw with enough space for the thrower to comfortably hit you

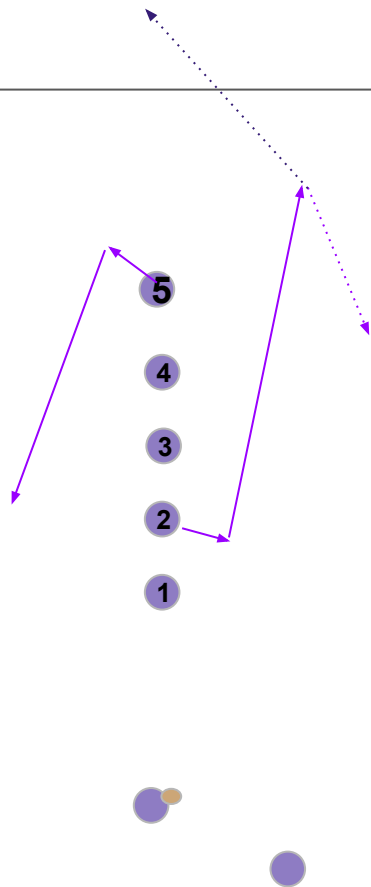

Initiation Inactive Clearing
Continuation Reset

Pull Play: Zipper (Booty Version)

- Typically we time this off of the centering pass (start your cut so you are attacking space as the frisbee is caught)
- 5 and 4 in the stack should cut under in opposite directions
 - This example shows 5 going to the open side, and 4 to the break, but you could change this up
- 3 in the stack goes deep
- 3 should be looking not only for the deep pass, but also preparing to come under for the continue if 4 or 5 get the disc.
 - All cuts are viable in this booty zipper
 - Fall to handler reset activity if play doesn't work
- Whoever is cutting to the breakside (generally 4) should be an FMP so that we are not setting ourselves up for an MMP poach in the deep space

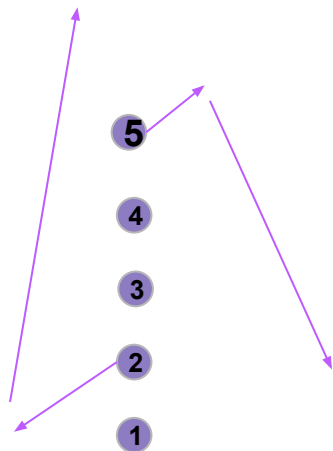

———> Initiation ———> Inactive Clearing
 ———> Continuation ———> Reset

Pull play: Windmill (Option 1)

Vert stack break side play

- Goal: 2 leads, engages their defender and cuts deep, potentially pulling 5's defender as a help
 - 5 follows, cutting under **to the break side**, engaging defender if needed
 - Ideally 5 initiates after 2 has passed them
 - 2 cuts under if neither option open
 - 4 should be an FMP (to prevent MMP deep poaches)
 - 1 fills as handler as needed
 - Default into vert flow if neither player gets open

Pull play: Windmill (Option 2)

Vert stack break side play

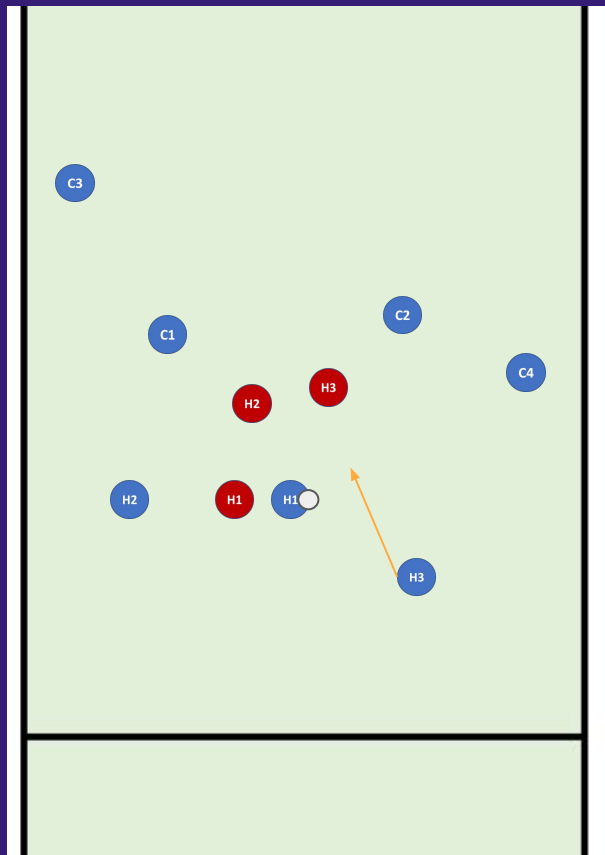

- 2 leads, engages their defender and cuts deep, potentially pulling 5's defender as a help, it is important that you make a convincing cut to the breakside so your defender follows and does not stay to just poach (although if they do stay you may be very open deep)
 - 5 follows, cutting under **to the open side**, engaging defender if needed
 - 4 should be an FMP (to prevent MMP deep poaches)
 - 1 fills as handler as needed
 - Default into vert flow if neither player gets open

Zone Offense

Goals

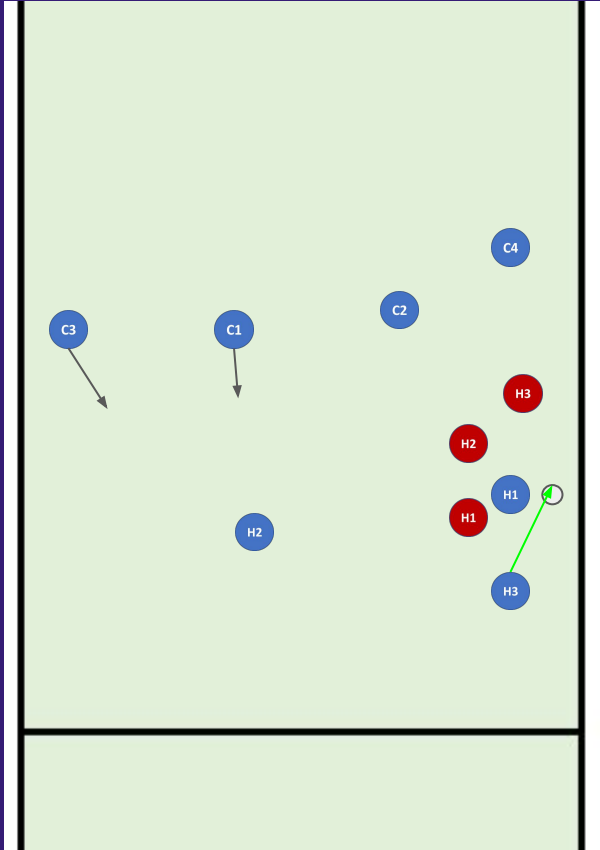

- Handlers look to quickly swing the disc
 - This will open up looks downfield
- Downfield cutters find the holes/soft spots in the cup
 - Forces defenders to make difficult decisions about what to cover
- Lots of fakes
- Make the easy throws

Zone Offense Roles

- Thrower (H1): Looks to throw a lot of fakes to move the cup
- Breakside Handler (H2): Try to position self in the holes of the cup to be ready for a break throw
- Openside Handler (H3): Look to gain yards on the swing or **crash through the cup**
- Poppers (C1 and C2): Find the holes in the cup
 - This isn't a super active role as you are mostly waiting to see if a throw can be found through the holes in the cup
- Wings (C3 and C4): On the break side stretch the field (C3), on the open side sit underneath (C4)

Zone Offense: Sideline Trap

- Reset handler (H3) positioned directly behind thrower for dump and swing or **crash through the cup**
- If the dump is hit, H2 is in position for the swing
 - The far side wing and popper (C3 and C1) are then in good positions for a continue

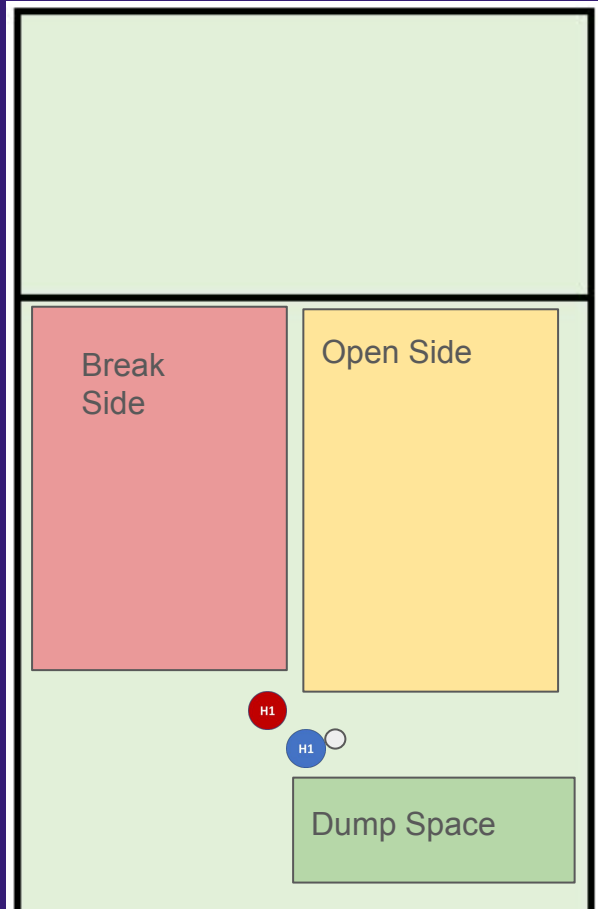

Defense

Goals

- Find smart match ups
- Determine marking/downfield strategy
- Be prepared with an offensive strategy for a turn
- Disrupt the first option by getting down the field quickly on the pull
 - Cover the pull and stay on sides

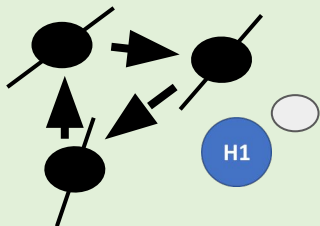

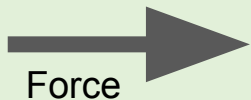

Person Defense

The Areas of the Field: Defense

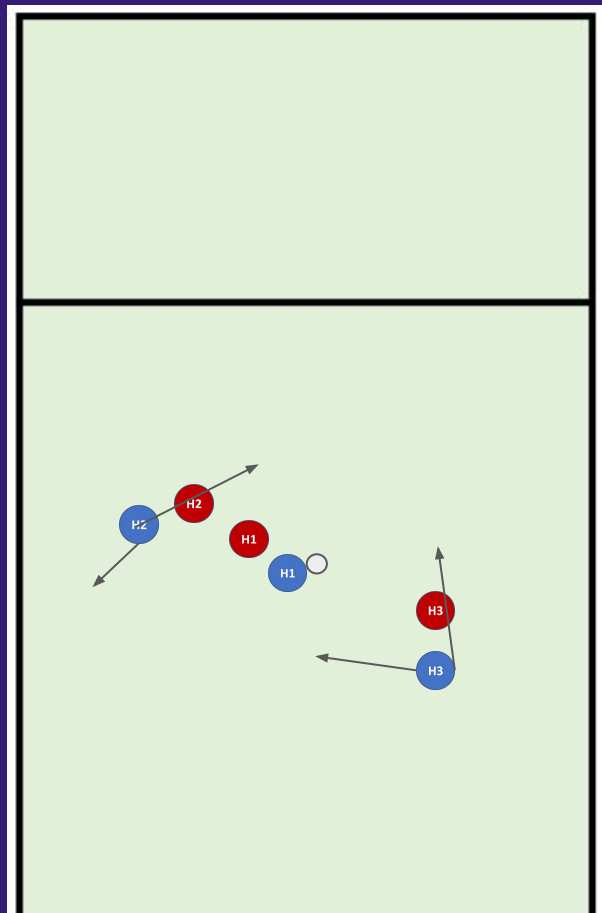

- Mark: Take away (or make difficult) throws to the break side
- Open Side: Position yourself to take away the biggest threat (choose either the under or the deep)
- Break Side: Position yourself between your player and the open side
- Dump Space: Position yourself between your player and the thrower
 - Guard against the biggest threat (usually taking away the around or the strike)

The Mark

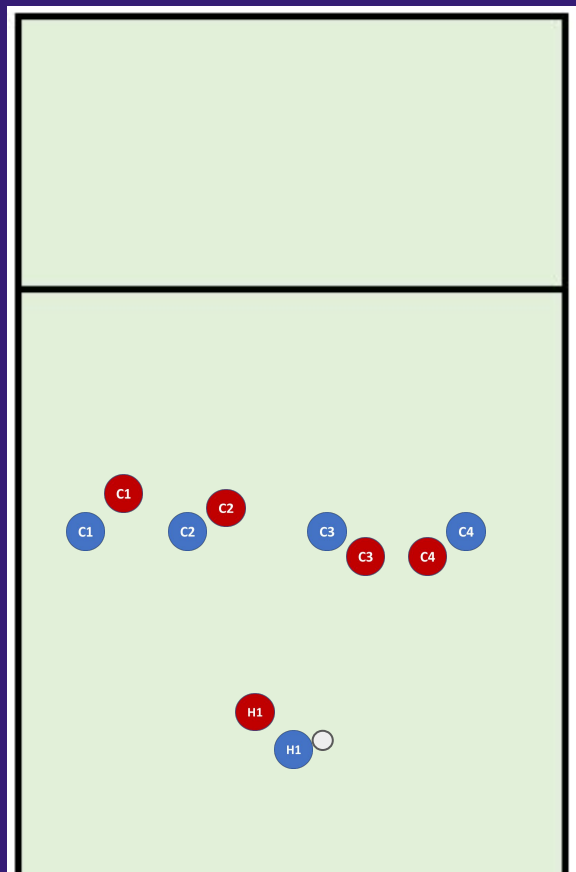

- Marks should be active - shuffling rather than stationary.
- Triangle Mark (as shown):
 - Start in a “normal” position - about a yard off the throwers break side hip
 - If they pivot around - shuffle sideways to contain.
 - If they look inside - step back.
- Other Mark Options:
 - Flat Mark: Prevent downfield throws (force swings), still very active
 - Disruptive Mark: Disrupting the thrower, could be very tight mark, bumping the thrower, or jumping erratically
 - Aggressive Mark: Goal to get a point block at the expense of not doing as much to take away part of the field, works well if you know the tendencies of a thrower

Handler Defense

- Position yourself where you can see the disc and your person
 - Head on a swivel
- Use your body to dictate where the handler can move
 - Still make sure you are pressuring both options
- Communicate with the mark so they know what you are taking away and vice versa
- Open Side (H3): Reset is looking for upfield or around
 - Dictate which is more open, in this case it's the around
- Break Side (H2): Looking for strike or around
 - Should almost always position self to take away strike
 - Mark is taking away the around

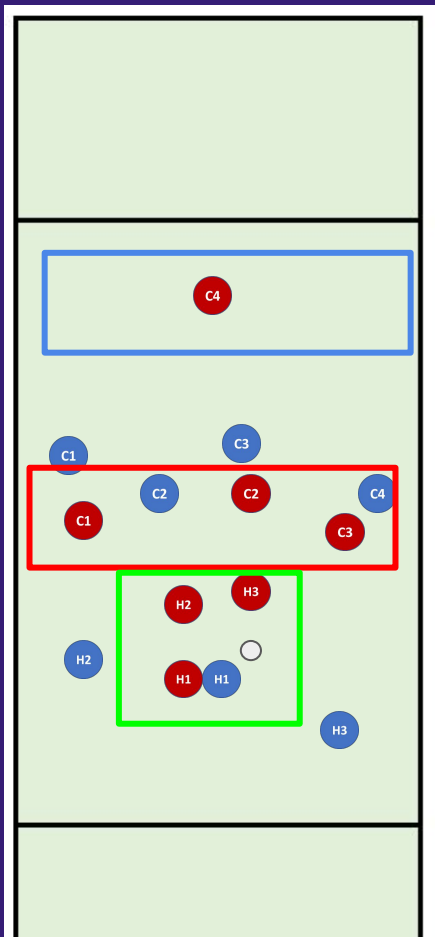

Cutter Defense

- Set up with hips neutral to most dangerous cut
 - Typically open side under/deep
 - Depends on where on the field you are
- Focus on opponents hips to determine their movement - don't commit too early
- Dictate what they have by positioning yourself between them and the space you are taking away
 - C1 and C2 are taking away the deep space
 - C3 and C4 are taking away the under space
 - What you take away depends on weather, matchup, thrower, etc
- Still expect the cut you are taking away
 - Give space between yourself and the cutter and don't get caught on your heels
- Still pressure every cut
 - Dictating doesn't mean we are giving up on covering the other option

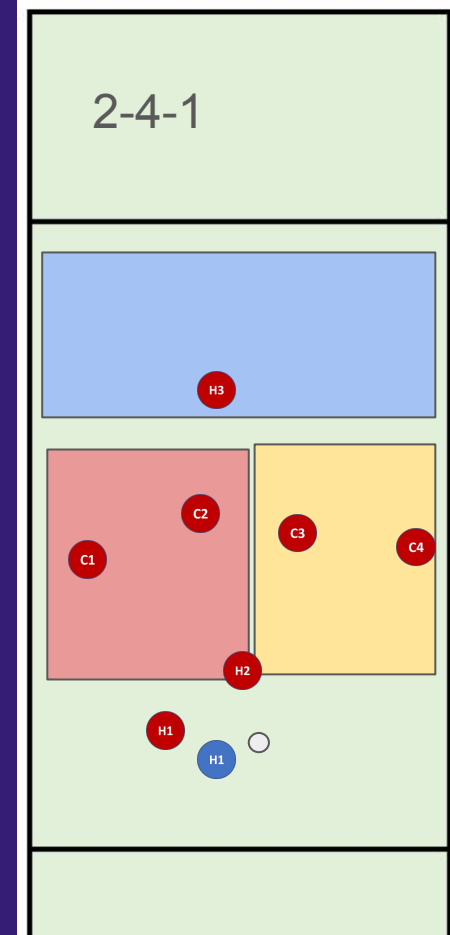

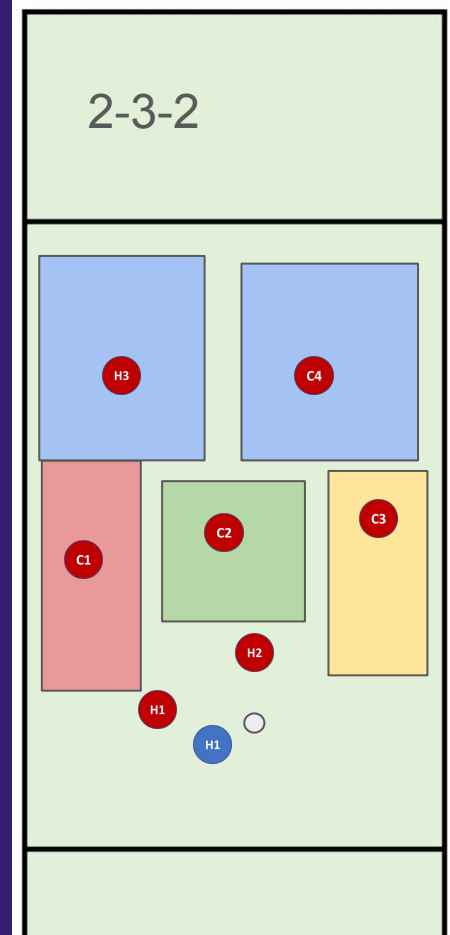

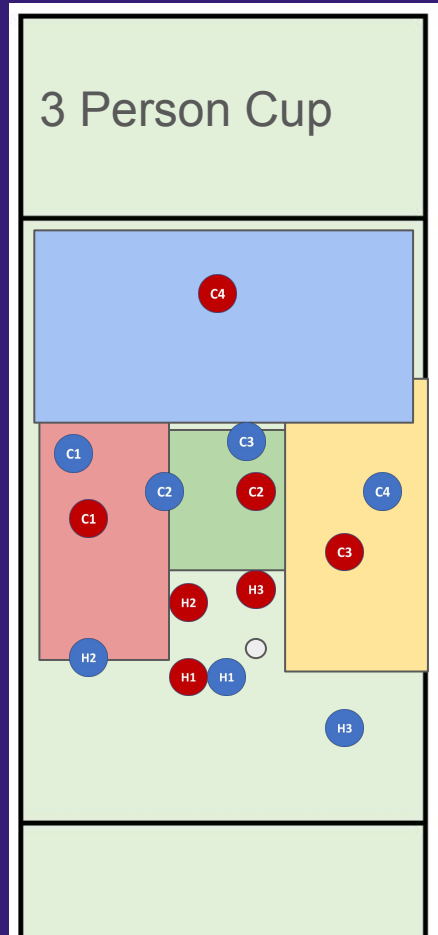

Zone Defense

Zone Defense Principles

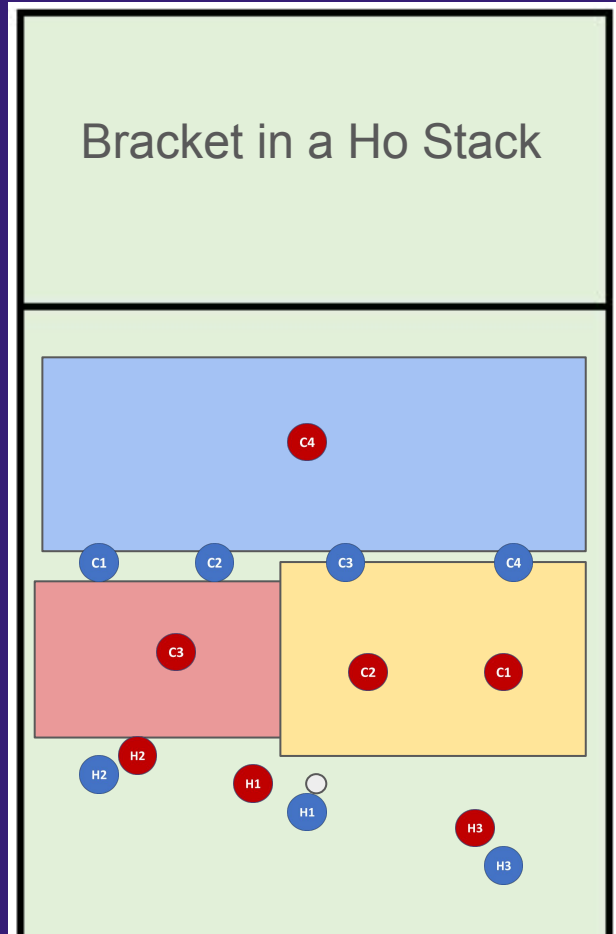

- Mark (H1): Hard no around - prevent throws to the break side
- Cup (H1-H3): Protect the space - no throws through the cup
 - Move as a unit and react as one
 - In a sideline trap, mark sets up behind the thrower to prevent dumps and cup rotates around to prevent breaks
- Downfield (C1-C3): Stay underneath cutters and know where they are at all times
 - Mid-mid (C2)
 - Wings (C1 and C3)
 - These players need to take away downfield threats when the disc is swung
 - In sideline trap, breakside wing punches in to stop over the top breakside throws and open side wing sits between the cutters and thrower in the open area of the cup
- Deep (C4)
 - Always be the last back on the field
 - Communicate to other people

Zone Formations

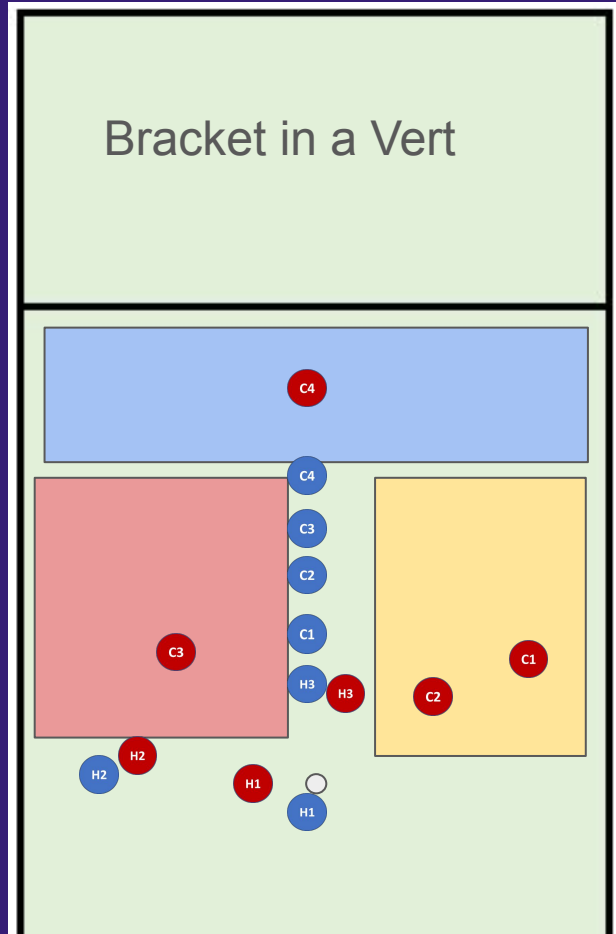

Bracket Defense

- A bracket covers a space more than a specific person v person match up
 - Cover a person in your area until you can pass them off to a defender in a new space
- This can take place on a smaller scale
 - ie bracketing just you FMPs by having one person cover the deep space and one cover the under space for two players
- Handler Defense (H1-H3): Handler defenders should play person defense and take away the same throws they would in a normal person defense
 - In a vert stack the third handler defender should stay on the first person in the stack (stack setter)

Bracket Defense (continued)

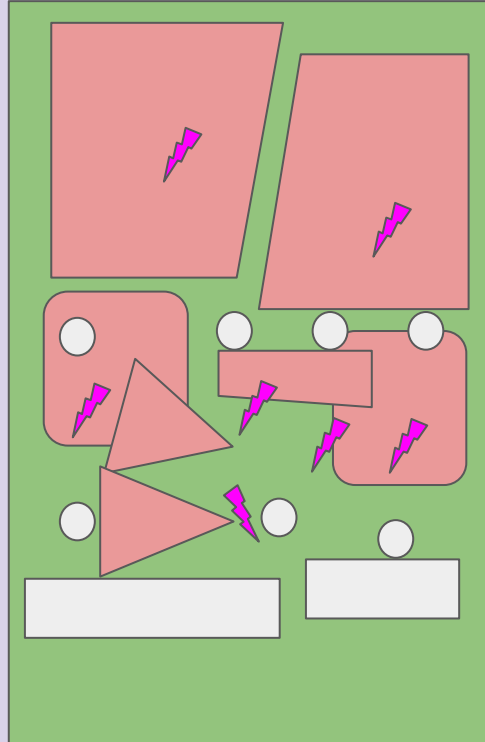

- **Open Side (C1 + C2):** These players will stay in the open space and cover players when they enter this area
 - Generally these players should largely be facing towards the downfield cutters
- **Break Side (C3):** This player covers the breakside under and should be angled to see both the disc and the players in their area
- **Deep (C4):** This is the last back and should never have a cutter further downfield than them
 - This person is largely communicating to other defenders

2-3-2 Zone - Force Middle

Take away those deep throws, BEBE

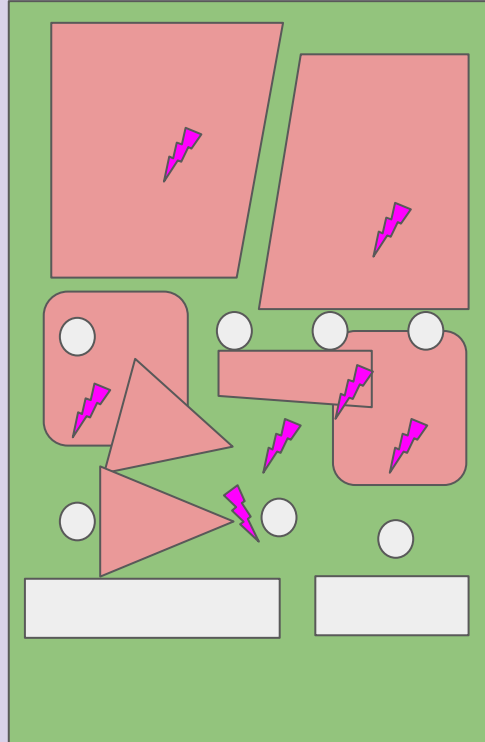

FULL PICTURE OVERVIEW

2-3-2 zone

- A 2-3-2 zone is useful against teams that like to huck it a lot, because it forces more players to touch the disc and puts 2 people in the deep space taking away the deep looks.
- Each position in the zone takes away the red space they're in.
- We're okay with throws to the white space.

2-3-2 zone - main objectives

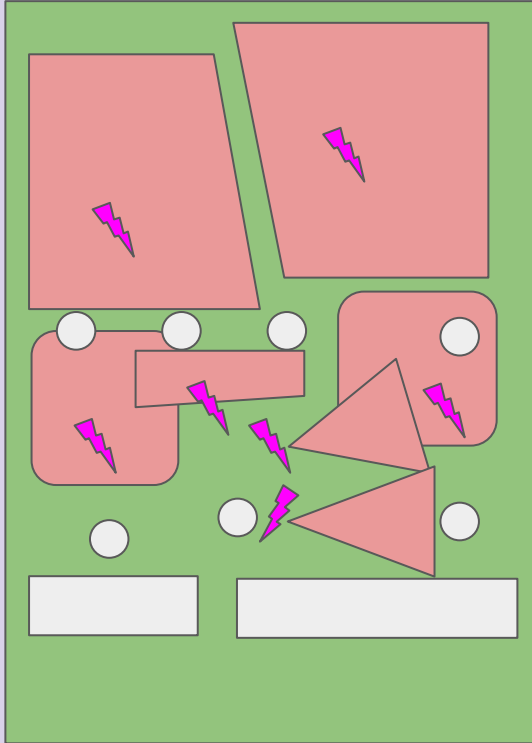

1. Take away deep throws
2. Make them throw more passes
3. Funnel towards the middle defenders

Additional objectives

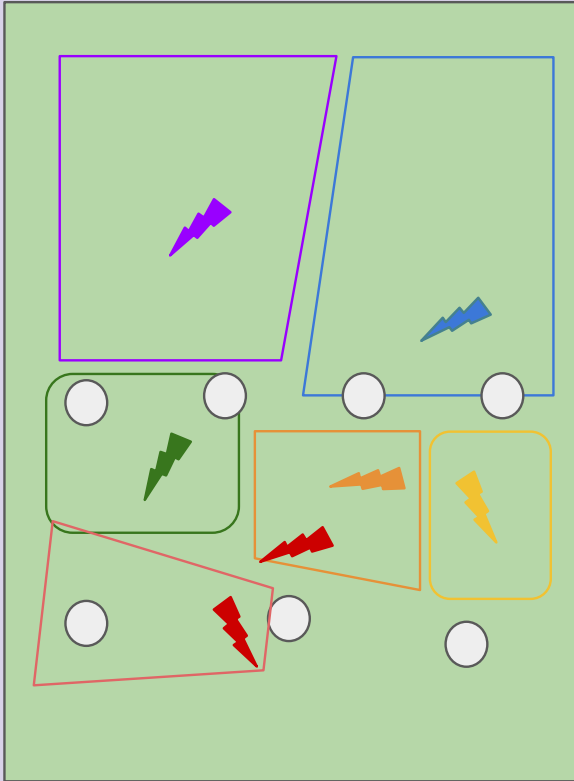

4. Make throws to the breakside sideline, floaty, and harder so we can get blocks.

2-3-2 zone - SWAP force when approaching sideline

- As the disc gets swung to the sideline, if there's no further player to swing to we switch the force

2-3-2 Zone Responsibilities

Front Layer

- **Cup** takes away direct throws to the breakside and upfield

Middle Layer

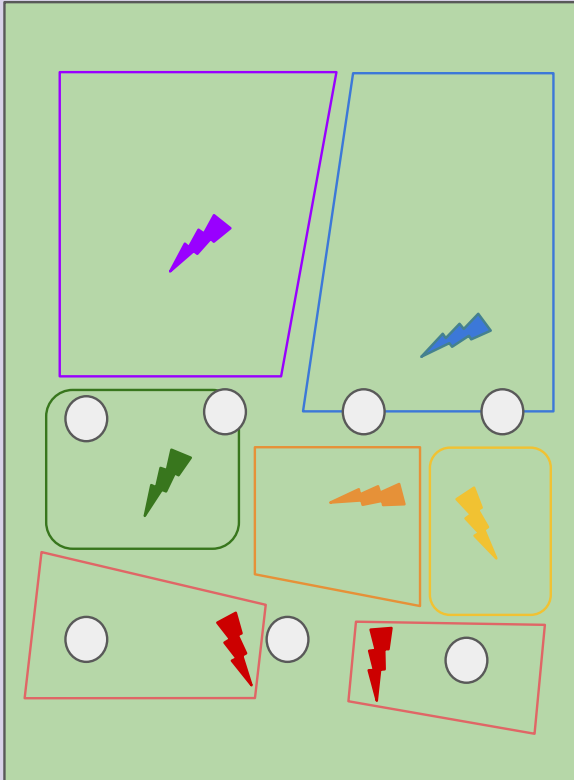

- **Mid** contains any forward passes to the center of the field
- **Wing (force side*)** takes away the most immediate threats
- **Wing (break side*)** looks out for hammers over the top or floaty arounds to the handlers on the break side

Deep Layer

- **Deep (force side*)** is responsible for deep throws along the same sideline, pinches in when not being threatened
- **Deep (break side*)** should be able to challenge and block any and all deep throws

*Cup changes the force when the disc approaches the sideline. Once flipped, players need to adjust their positioning

2-3-2 Zone Responsibilities - Disc Centered

Front Layer

- **Cup** takes away swings

Middle Layer

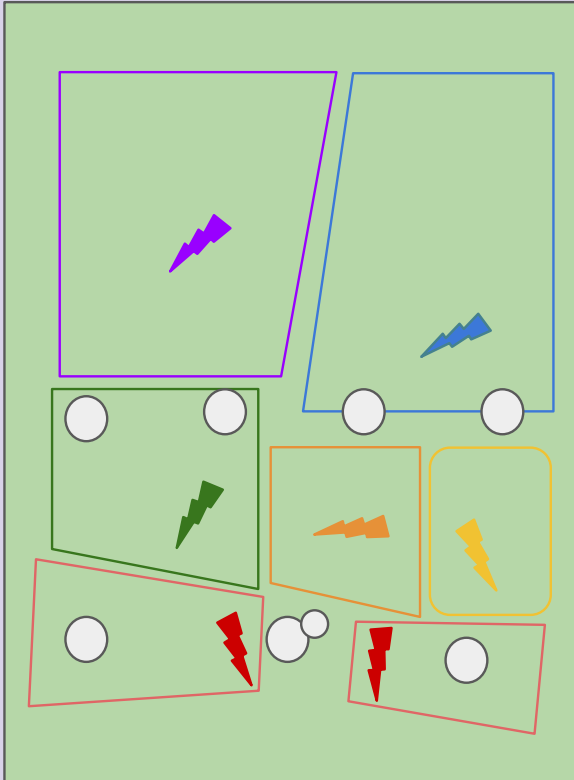

- **Mid** contains any forward passes to the center of the field
- **Wing (force side*)** takes away the most immediate threats
- **Wing (break side*)** looks out for hammers over the top or floaty arounds to the handlers on the break side

Deep Layer

- **Deep (force side*)** is responsible for deep throws along the same sideline, pinches in when not being threatened
- **Deep (break side*)** should be able to challenge and block any and all deep throws

*Cup changes the force when the disc approaches the sideline. Once flipped, players need to adjust their positioning

2-3-2 Zone Responsibilities - Disc Centered

Front Layer

- **Cup** takes away swings

Middle Layer

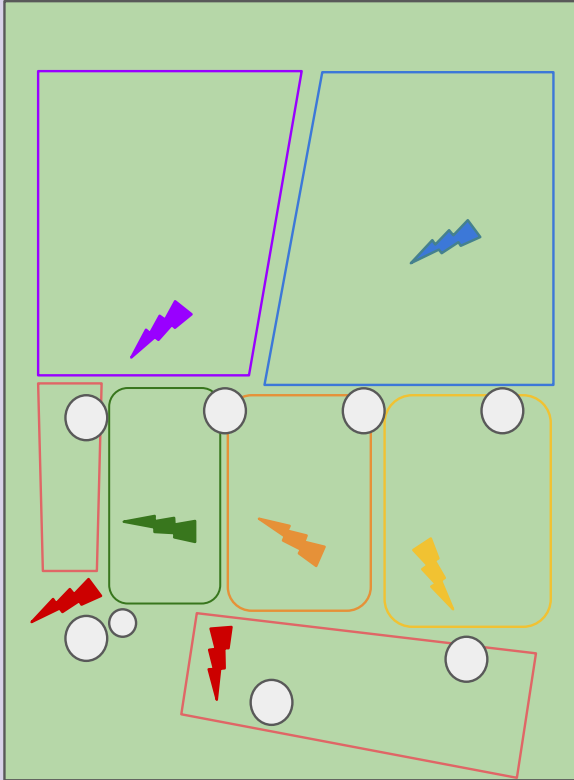

- **Mid** contains any forward passes to the center of the field
- **Wing (force side*)** takes away the most immediate threats
- **Wing (break side*)** looks out for hammers over the top or floaty arounds to the handlers on the break side

Deep Layer

- **Deep (force side*)** is responsible for deep throws along the same sideline, pinches in when not being threatened
- **Deep (break side*)** should be able to challenge and block any and all deep throws

*Cup changes the force when the disc approaches the sideline. Once flipped, players need to adjust their positioning

2-3-2 Zone Responsibilities - Disc on Sideline

Front Layer

- **Cup** takes away swings

Middle Layer

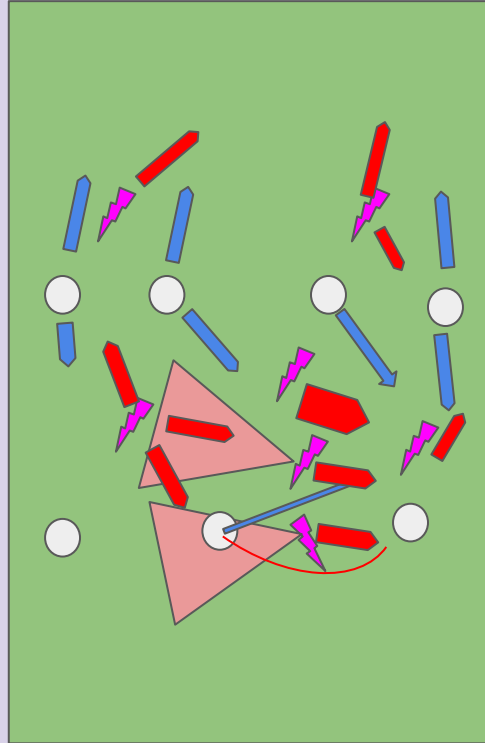

- **Mid** contains any forward passes to the center of the field
- **Wing (far side)** looks out for hammers over the top or floaty arounds to the handlers on the break side
- **Wing (near side)** takes away the most immediate threats

Deep Layer

- **Deep (far side)** is responsible for deep throws along the same sideline, pinches in when not being threatened
- **Deep (near side)** should be able to challenge and block any and all deep throws

*Cup changes the force when the disc approaches the sideline. Once flipped, players need to adjust their positioning

Concept - Take away Next Pass

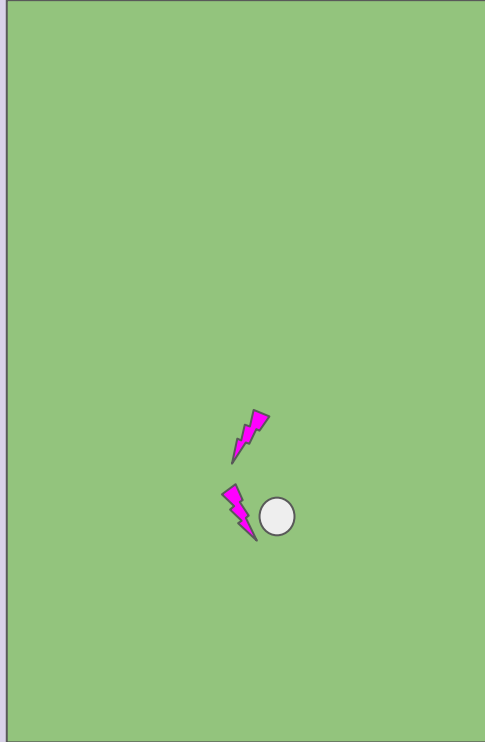

- Once the throw is up, if you certainly can't get the block, do not run to the player catching. **Defend the next cut.**
- **Blue Arrows** are some common Cuts offensive players would make
- **Red Arrows** are how each position will need to reach should those cuts happen

****The Loopy guy at the bottom is the disc being passed**

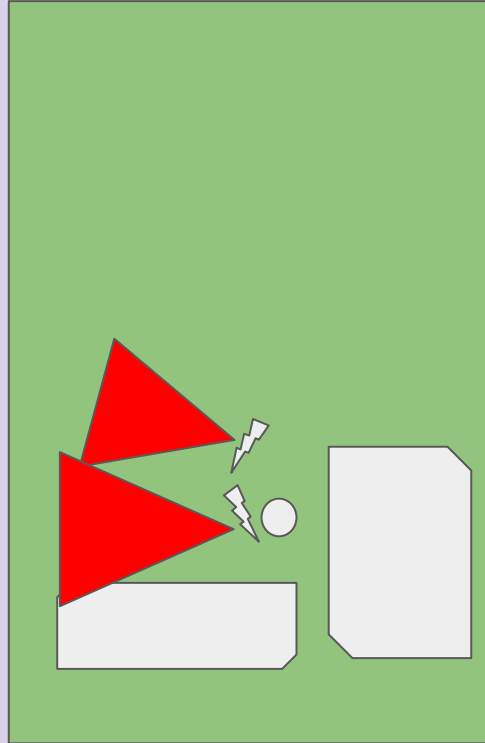

POSITION BY POSITION BREAKDOWN

Cup

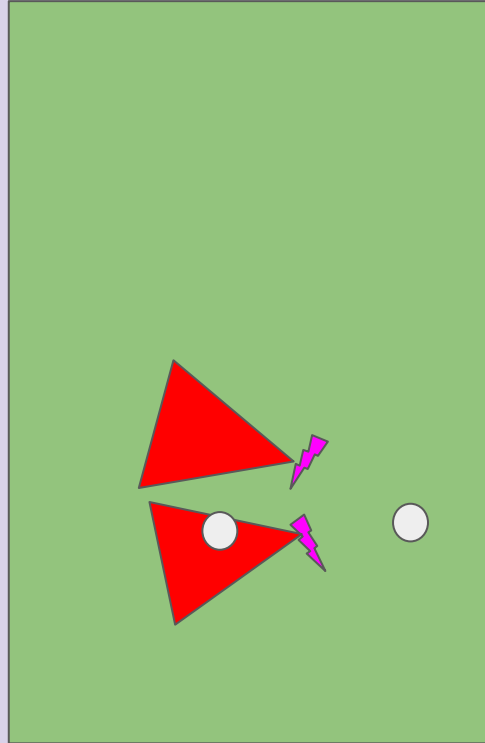

- 2 person cup
- Funnel disc to Sideline
- After a swing, take away bounce backs by running in the path between the former thrower and the new thrower.

Cup

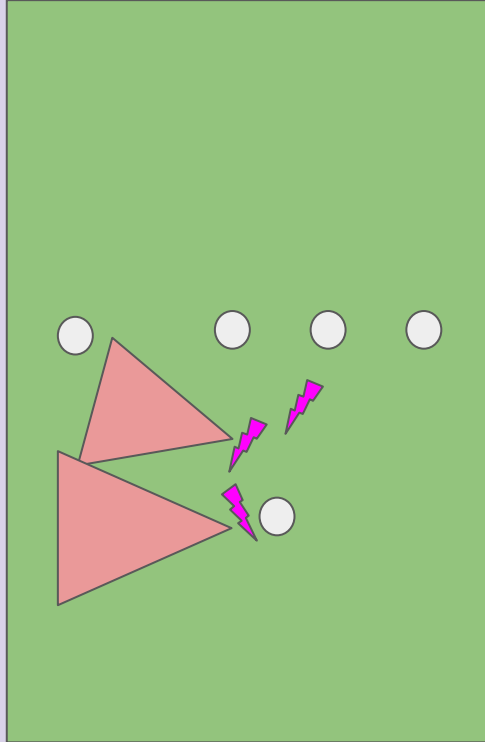

- Make throws between you hard
- Take away the red and be okay with them throwing to the white.
- Mark:
 - Keep hands low and force around throws to be high and floaty or a loss of yards. That will allow us to keep up or other teammates to get blocks.

Cup - when thrown force side

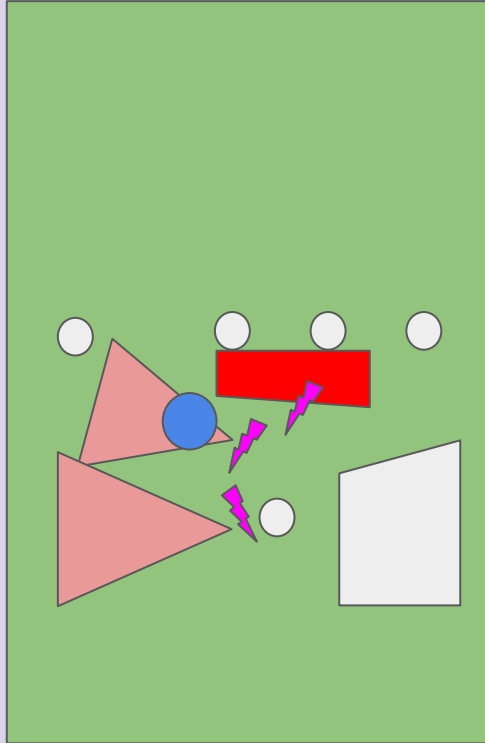

- When the disc is thrown to the force side work together to make the throw back to the center, hard.
- The mark can run into the backfield to seal off the bounceback.
- The 2 should stick with the mark. Even if it's slower.
 - Can speed up for a moment to contest a strike cut, but don't overcommit. Try to pass off to the wing or let them run closer to the boundary.

Mid

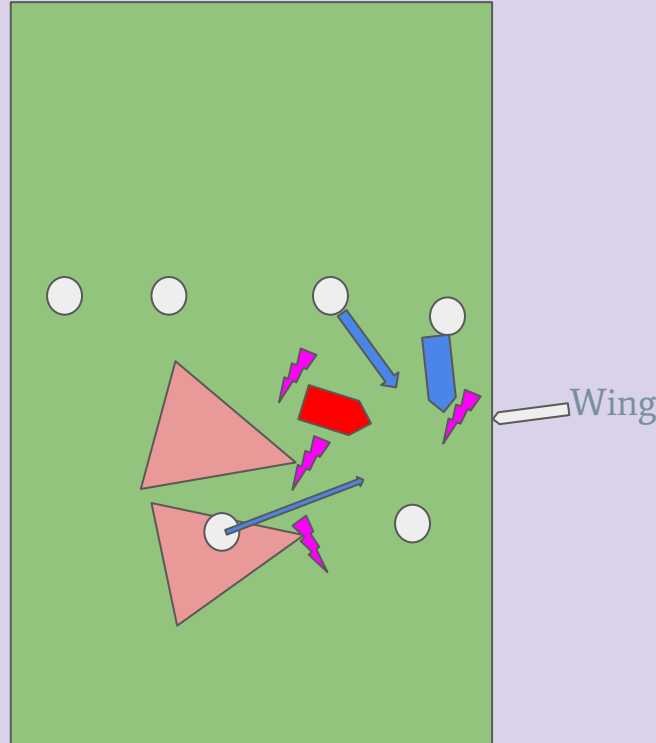

- Commit to Stopping the “Next throw” when the disc is in motion.
- Get blocks on unders near the open side.
- Try not to get beat in the space between you and the cut - specifically up field.

Mid

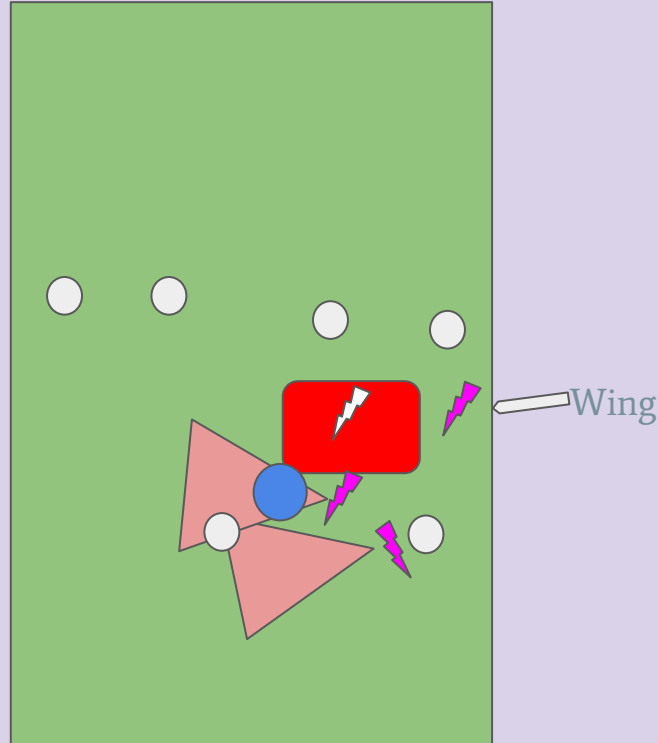

- Work to funnel the disc to the open side
- Communicate with the deeps to know when you can attack
- Be okay with throws to the grey space
 - Watch throwers eyes to potentially get a block near the blue dot if they throw a scoober/hammer over the top.

Mid - when thrown force side

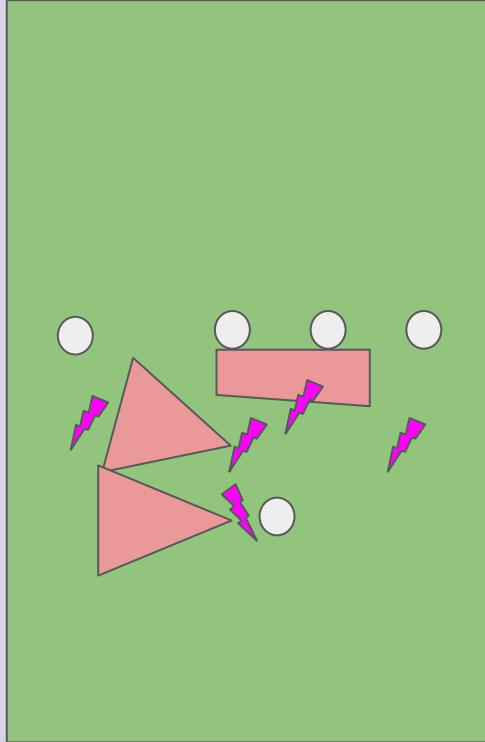

- Cut off the next throw. Do not run to the person with the disc.
- The Wing will handle the person closest to the sideline.
- Look for an attacking cut from the middle of the field (blue) and cut it off
- You could also attack a strike cut if you see it coming in time.

Mid - on the force side

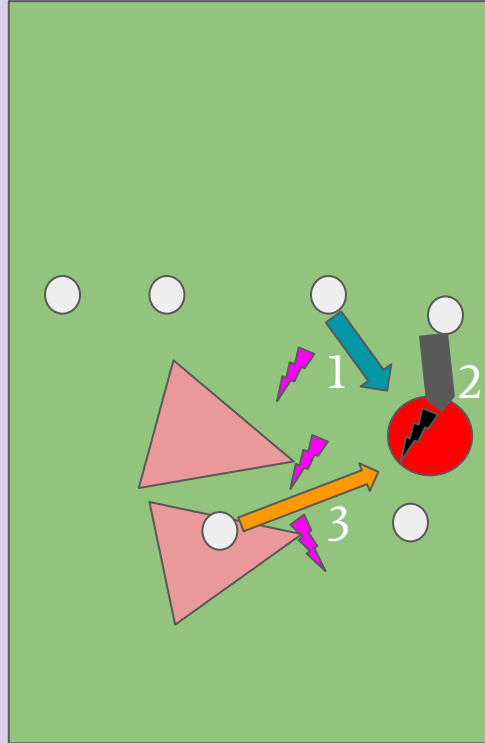

- Help force them to the sideline and clog up the throwing lane.
- Take away up field throws and take care of poppers running into the space.
- Watch throwers eyes for a short throw over the cup.

Wings

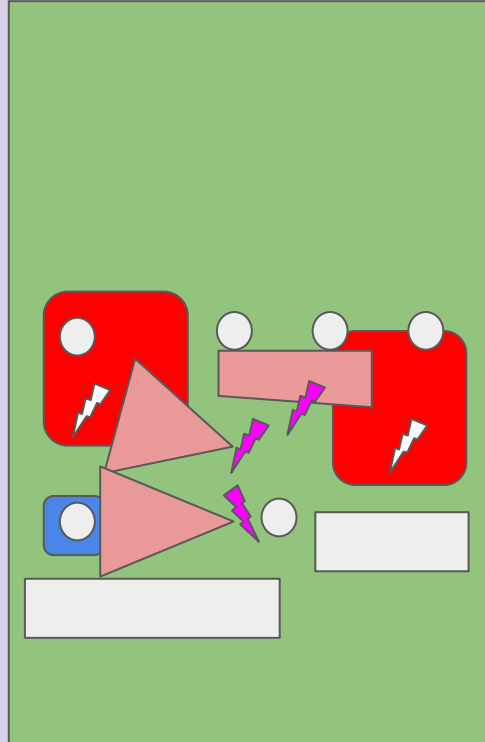

- Most rotation and opportunity for blocks
- Make throws over the top and to the sideline hard
- Contains the open side space to minimal gain
- Contest floaty passes behind the cup

Force side wing - when thrown force side

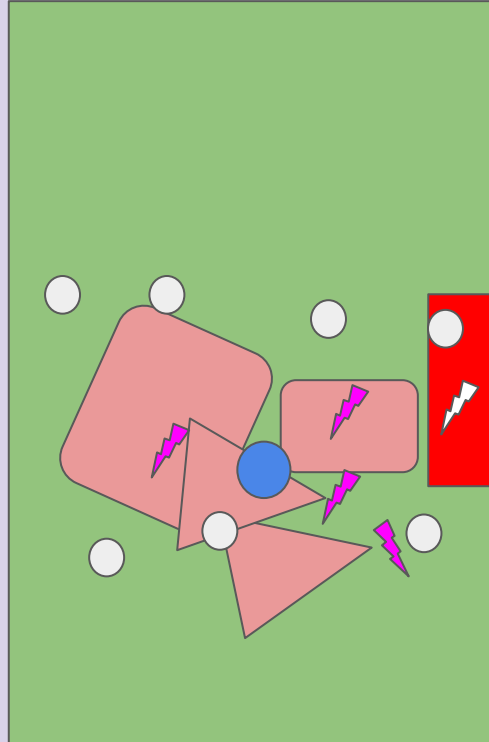

- JAM UP THAT SPACE!
- **Unless you hear from the deep on your side that you need to drop**, you can get really aggressive taking away unders
- The Gold space/under is the most important to stop. Check over your shoulder/talk with mid to make sure they get that.
- Silver is next most important after you check with mid.
- You may help with a strike cut

Wings

- Deny throws to the Red Areas. Throws to the Blue areas are great places to get blocks or turnovers
- We're okay with them throwing to the white

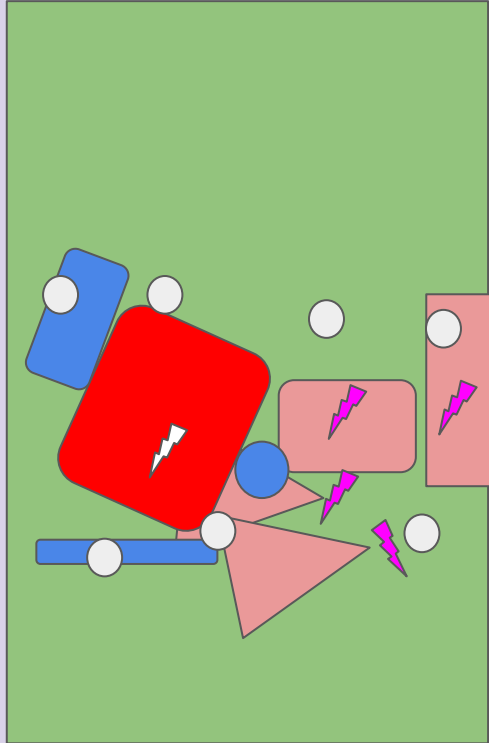

Wing - force side

Force Side:

- Take away the most active players directly up line and communicate with deep to drop them
- Work with mid to pass off and accept passes into your space.
- Limit up-field passes to as few yards as possible
- Never chase someone into the backfield

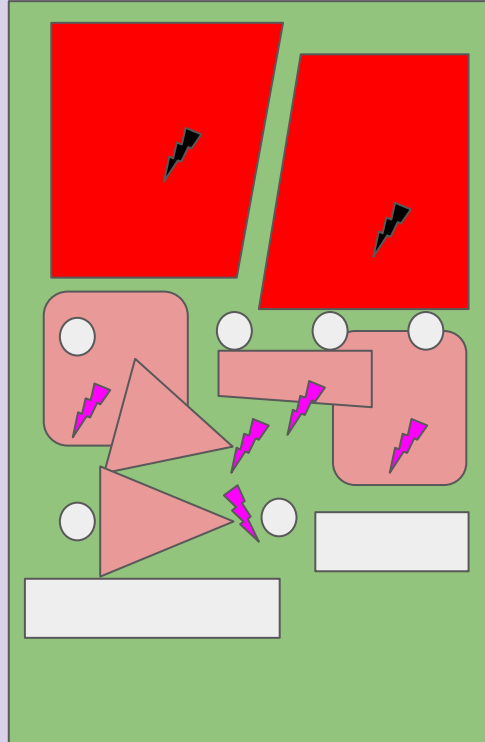

Wing - Break side

Break Side

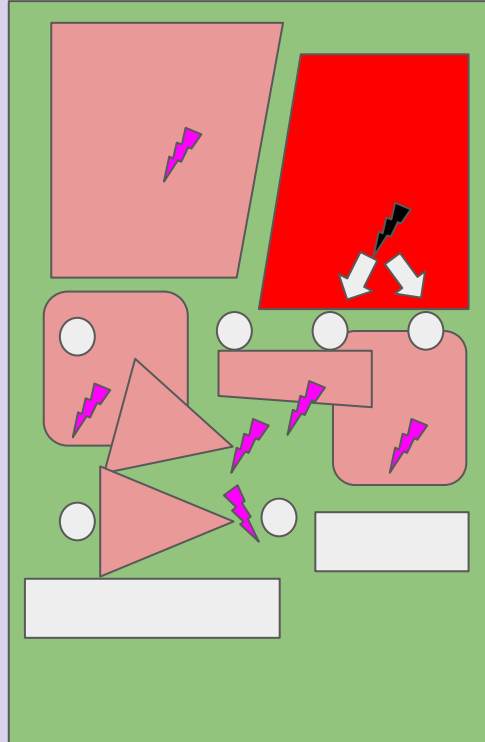

- Take away hammer and blade space
- Communicate with deeps to know when to pinch closer to the active space or advance to attack handler space
- Floaty throws to rest handlers is an excellent way to get blocks.
- You're guarding people, not space, so you can pinch when their offence is crowded
- Red is dangerous space
- Blue is potential block space

Deeps

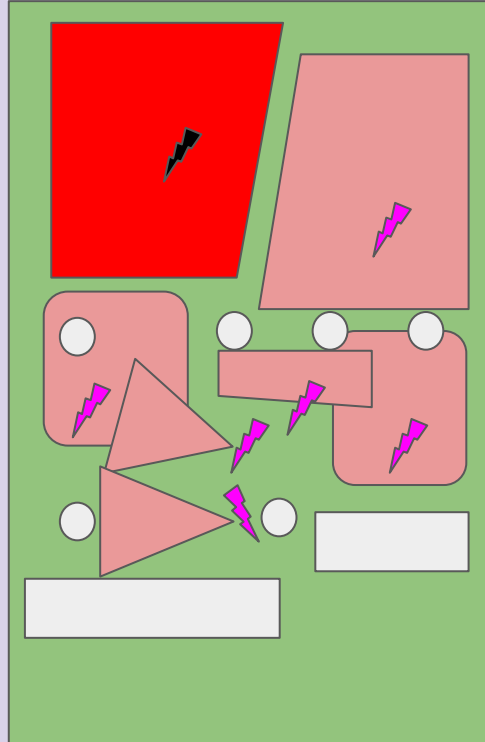

- The Point of a 2-3-2 is to have 2 deep players taking away the deep looks. For teams that are huck happy, this is an excellent counter.
- Follow the cutters into the deep space, and if they do throw a huck, be ready to double team that cutter
 - IF the disc is floating and both deeps and the cutter are in position to catch it, defenders should sandwich that cutter. One person on both sides
- In charge of calling fire when nearing the brick mark or final $\frac{1}{3}$ of the field

Deep - force side

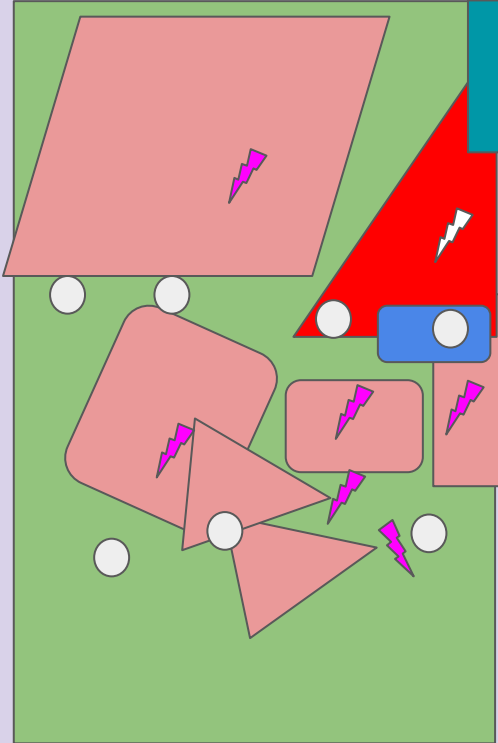

- Your first job is to stay deep and thwart any deep throw attempts. Don't get beat deep. And communicate when you're being pulled deep.
- When all cutters are cutting closer to the disc, the force side deep can play more aggressively under helping with anything chipped over the mid and covering gaps
 - They should communicate this to the mid and force side wing so those players can play more aggressively

Deeps - Break Side

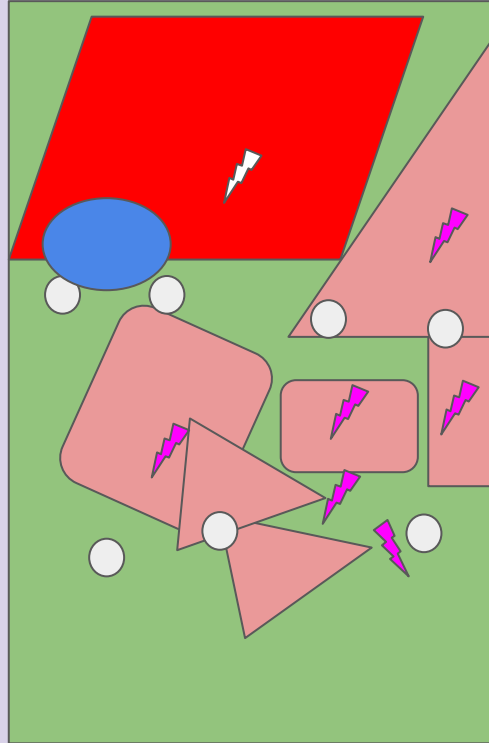

- The Last back almost always
- Your first responsibility is to take away any deep cutters on your side of the field.
- Second is to help on any deep throws thrown against the other deep.
- When most cutters are cutting under and near the disc, communicate to your other deep that they can push in the under space and be more aggressive, but call for them to drop when they need to

Force Side Deep - on trap sideline

- When the swing comes to your side, your first responsibility is any hucks up the force sideline (Gold)
- If there is no deep cut there, pinch under to help take away any medium range throws. (Blue)
 - Take away any cutters going through the Red Area. Work to avoid getting beaten to the sideline behind the force side wing.
- Communicate with other deep if you're needed to drop back and help/pick up another player
- Ask for wing to drop back if you're pulled deep on the sideline

Break Side Deep - on trap sideline

- You are the last back.
- Any hucks that get thrown are your responsibility to stop or sprint to help with if it's to the other deep's side.
- Play towards the middle of the field to see everything.
- Call for help from other deep who may be playing closer when needed.
- Look out for cross field hammers to the blue space.
